The small business segment is unrivaled as one of the fastest growing markets for server deployments. According to IDC research,² more than one million servers are expected to be installed between 2005 and 2009 in small businesses worldwide. This market opportunity is unmatched by any other segment and is a key opportunity for Microsoft partners.

Create new business opportunities.

The potential market for SBS 2003 R2 is substantial and poised for continued growth. This represents a significant opportunity for you to grow your customer base and drive revenue.

Install first servers.

The market for selling and installing a first server for small businesses can be a lucrative endeavor. A study conducted by Yankee Group³ showed:

- **61 percent of small businesses** said they currently use or plan to deploy SBS 2003.
- **Sales soared by 100 to 300 percent** as reported by Microsoft partners and attributed to SBS 2003 deployments.

Migrate existing server software.

SBS 2003 R2 has improved functionality and management tools, making it a better product solution for customers with older software such as Small Business Server 2000 and Windows NT® Server 4.0. (Microsoft ended its support of Windows NT® 4.0 on December 31, 2004). This offers partners an immediate sales opportunity with over two million Windows NT Servers still installed in the small business market worldwide.

Sell additional hardware and services.

SBS 2003 R2 integrates seamlessly with Microsoft products designed for small business. This allows you to drive additional revenue through the sales and deployment of Microsoft software including Windows XP Professional, Office 2003 Small Business Edition, Microsoft CRM 3.0 SBE, Microsoft Dynamics™ GP, and Windows Mobile.

For partners, SBS 2003 opens the door for you to provide a wide range of services – from deployment to management, monitoring, and training, to customizations and mobile device integration.

"Value-added resellers and consulting partners reported strong sales; increases ranged on average from 100 percent to as much as 300 percent. The resellers and consultants attributed the increases directly to demand for Windows Small Business Server 2003."³
