Localization is the process of adapting software to meet country-specific laws or regulations. Microsoft localizes Microsoft Dynamics 365 for Operations to include features and functionality designed to address specific tax, accounting or financial reporting requirements for various countries. Features or functionalities that are available in a particular country may not be available in all countries. Please consult your channel partner for details about product features and capabilities. Also consult them and/or your professional advisers to determine whether this software is appropriate for your business needs in a given country.

Microsoft Dynamics 365 for Operations

Localization & Translation Overview

Organizations doing business in a particular country must comply with country-specific laws, regulations, and common business practices to handle their daily business transactions and operations and meet their legal obligations for activities conducted in the country. Microsoft recognizes that non-adherence to these laws and regulations can lead to severe consequences for an organization doing business in that country.

As an enterprise resource planning (ERP) solution, Microsoft Dynamics AX software helps organizations manage their various business processes through its extensible architecture. Microsoft extends the business process functionality of its Microsoft Dynamics AX software by developing specific commercial requirements, language, and non-vertical, national, or international functionality to address specific tax, accounting, or financial reporting requirements for countries where Microsoft makes this software generally available. The process of adapting software to meet local laws or requirements is called localization. The process of adapting software to meet language requirements is called translation.

Laws and regulations vary by country. While Microsoft Dynamics AX software “out-of-the-box” is localized and/or translated to address specific laws and/or regulations for particular countries, it is not supported in terms of localizations, translations, or technical support in all countries. Features or functionalities that are available in a particular country may not be available in all countries. Rather, we look to our channel partners, who are an important part of our global strategy, to deliver Microsoft Dynamics AX solutions that help customers meet their compliance obligations. Channel partners may adapt the Microsoft Dynamics AX software to:

- Supplement the base Microsoft Dynamics AX application by developing functionality to meet specific laws or regulations that are not covered by features provided “out-of-the-box” (e.g., regulations that are unique to states, provinces, cities, or municipalities in a particular country); or
- Create their own localizations and/or translations in countries where Microsoft does not offer a localized and/or translated version of Microsoft Dynamics AX software.

Partner-created solutions are owned, implemented, maintained, and serviced by, or on behalf of, the originating channel partner.
