Nintex: Workflow for Everyone in the SharePoint 2013 Era

Alexander Burton
Technical Product Manager
Nintex

Agenda

What is Nintex doing for SharePoint 2013?

What is new?

**work
flow
for
every
one**

Nintex 2010-Era Features Not in SharePoint 2010

Design within SharePoint	Step-by-step profiling	Custom roles	LDAP interop	Lync Server provisioning
Drag-and-drop	User workloads	Custom context placeholders	ADO.NET interop	Cloud Services interop
Configure and draw at the same time	Audit completions, cancellations	Loops	XML read/write	OnPrem/Online data exchange
No desktop installs	Status updates	ForEach Iterations	Word Services interop	Custom ASP.NET forms
No extra purchase	Declarative activities	State Machines	Excel Services interop	Workflow variables in forms
Minimized clicks	Calling workflows like subroutines	Switches	User Profile interop	Read/write tasks and source item properties
Guided design	Templates	Conditional start rules	Audience interop	Multiple form layouts
Unified dialog boxes	Versioning of workflow designs	Scheduled workflows	BCS interop	External deployment
Single ribbon	Control access to designer	Repeatable workflows	Search interop	OAuth brokering
Lazy Approval	Control access to individual activities	Cross-farm access to content	MS CRM interop	Auto retry logic
Roll-up task Inbox	Enforce review of changes	Presence-based routing	BizTalk Server interop	Custom CSS
Roll-up workflow status	Staged deployments	SOAP interop	Active Directory provisioning	Custom JavaScript
Workflow progress		REST interop	Outlook calendar interop	Provisioning
Outlook task interop		WebDAV interop	Exchange Server provisioning	
Performance statistics				

Nintex 2010-Era Features Not in SharePoint 2013

Design within SharePoint	Step-by-step profiling	Custom roles	LDAP interop	Lync Server provisioning
Drag-and-drop	User workloads	Custom context placeholders	ADO.NET interop	Cloud Services interop
