Compliance Manager

How does Office 365 help today?

Examples of what you can do today

- ✓ Apply governance labels for data retention and deletion
- ✓ Sensitivity labels using **Azure Information Protection** plug-in
- ✓ View protected Word, Excel & PowerPoint documents on Windows, Mac, iOS and Android
- ✓ View protected **Outlook** emails on Windows, Mac, iOS and Android
- ✓ Protect Word, Excel & PowerPoint documents on Windows and Mac
- ✓ Protect **Outlook** emails on Windows and Mac
- ✓ **DLP** triggers to protect documents, email and attachments
- ✓ Shared developer platform for 3rd-party solutions (e.g. DLP vendors)
- ✓ ...and more

Data Loss Prevention in Office 365

Detect, protect, and monitor your sensitive information

Discover

- Scan for sensitive information in Exchange, SharePoint, and OneDrive for Business
- Find over 80 sensitive content types using inbox templates
- Build your own custom rules to fit your organization

Protect

- Educate and empower users with policy tips
- Restrict sharing when sensitive information is found
- Works across all Office 2016 desktop apps

Report

- Track policy violations through inbox reports
- Consume DLP information in third party tools leveraging built-in APIs

Azure Information Protection

Better secure your sensitive information—anytime, anywhere

Persistent classification and protection

- Policy driven classification and protection
- Classification labels and protection travel with the data
- Data security regardless of where data is stored or shared

Secure sharing

- Secure sharing of data with customers and partners
- Authentication for all companies using Azure AD
- Enforcement of authorization policies

Visibility and control

- Powerful logging and reporting for IT
- Data use/abuse tracking for IT and users
- Document revocation in case of unexpected distribution

Simple, intuitive for users

- Intuitive interface for users
- Integrated into common apps and services
- In-product notifications help users make right decisions

Office 365 Advanced Threat Protection

Reduce the threat of malicious content

- Extends Exchange Online protection capabilities to better safeguard users against common attack methods with Safe Attachments and Safe Links

Increase understanding of threats

- Robust tracing and reporting help IT find patterns to malicious content and adjust policies for greater protection

Meet business and IT needs

- Easily manage policies for Safe Attachments and Safe Links to meet specific needs from a single cloud console for faster remediation for issues that are detected including ZERO DAY attacks
