

## features

### 13 **Presentation virtualisation with Enhanced Terminal Services**

Virtualisation isn't limited to virtual machines and operating systems. Terminal Services has been abstracting the presentation layer of remotely run applications and desktops for years. So how has it changed in Windows Server 2008? **Joshua Schnoll**

### 24 **Monitoring Windows Server® 2008 with Operations Manager 2007**

As you deploy Windows Server 2008 into your environment, you'll need a way to manage and monitor its health, performance and availability. Fortunately, you can use the existing System Center tools you are already familiar with. See how you can use Operations Manager 2007 to manage your Windows Server 2008 assets. **Pete Zerger**

### 32 **Achieving high availability for Hyper-V™**

Consolidating servers onto fewer machines has many advantages, provided that your systems remain highly available. Here's a guide to using Windows Server 2008 Failover Clustering to bring high availability to your Hyper-V virtual machines. **Steven Ekren**

### 42 **Using Configuration Manager with Windows Server 2008**

The release of System Center Configuration Manager SP1 added full support for managing Windows Server 2008 systems, including such new features as Server Core. Get a quick overview of deploying the Configuration Manager agent and using Configuration Manager to manage Windows Server 2008 systems throughout your organisation. **Cameron Fuller**

### 46 **Windows PowerShell™ in System Center Operations Manager**

Windows PowerShell has been integrated into System Center Operations Manager 2007, offering a powerful way to perform and automate common administrative tasks. Here's an overview of how you can use Windows PowerShell in Operations Manager to perform routine maintenance, manage agents, and more. **Marco Shaw**

### 54 **Enhance TS Gateway Security with ISA Server 2006**

Using the new TS Gateway feature, Windows Server 2008 enables users to access their desktops from anywhere, without using a VPN. Find out how you can publish the TS Gateway through ISA Server 2006 and extend the ISA Server 2006 publishing scenario to include client health enforcement. **Dr Thomas W Shinder and Yuri Diogenes**

## TechNet Magazine UK to close in May

Unfortunately this is the penultimate issue of TechNet UK magazine, as due to many pressures we have been unable to sustain the magazine beyond May. The good news is that you will still have two options to read the magazine content after the May issue:

**TechNet Magazine Online (free)** The UK will have an online magazine that aligns with the US magazine so ultimately you will have more content as these are monthly issues – <http://technet.microsoft.com/en-gb/magazine/default.aspx>

**TechNet Magazine US (paid for subscription)** If you would still like to read the printed magazine then you can get 12 issues of the US TechNet Magazine Plus the TechNet Magazine CD for £39.95, or just the TechNet Magazine CD for £9.95 including VAT and P&P. These are available from our partner publisher at <http://www.parkway.co.uk/technet>
