

## Mobile Extender for Outlook

### Premier SMS Software Suite

**Jeyo Mobile Extender for Outlook** adds SMS messaging functionality to Microsoft Outlook. With the Extender installed and a mobile device connected via ActiveSync, all of Outlook's impressive e-mail management capabilities can now be applied to SMS mobile messaging. From Outlook on their PC users can send and receive text messages through their Windows Mobile device, backup and restore messages, forward their e-mail to text messages, manage the message store on their device itself, and more. All from the familiar Outlook interface.

Microsoft's Mobile Device Center / ActiveSync elegantly synchronizes contacts and calendars, but SMS data is ignored and ends up trapped on personal and corporate devices. Jeyo Mobile Extender for Outlook integrates that data back into the Exchange information ecosystem or into users' personal message store where it can be managed at their leisure.

Jeyo Mobile Extender for Outlook has won several industry awards including Handango's Best New Application For Smartphone 2005 and has been consistently ranked as one of the top ten most popular applications for Windows Mobile devices.

Jeyo Mobile Extender seamlessly integrates with Outlook. The software creates a set of SMS personal folders that sync automatically with any Windows Mobile device and the new SMS toolbar and SMS menu provide a suite of easy-to-use new text messaging functionality.
