- Gain 24 x 7 access with a 1 year subscription to the full portfolio

- License includes one subscription per user for 1 year

- Enjoy flexible training options while maximizing return on workforce training investment

With Premier, Knowledge is Power

Premier Support offers flexible, proactive services designed to optimize your IT environment and increase productivity. As part of those services, customers like you can have access to Workshop Library on-demand.

On-Demand Training

Workshop Library on-demand is a subscription service providing access to a rich portfolio of on-demand video training much of which includes hands-on labs with live virtual environments. Each video features content based on our in-person Workshops. The content is broken into segments featuring lectures and demonstrations delivered by Microsoft expert Engineers. One of the key advantages of on-demand training is that it gives you the opportunity to revisit any or all of the material at your convenience.

By subscribing to Workshop Library on-demand you will have access to the entire Library portfolio. This will enable you to enhance your learning skills and reap the benefits of this rapidly growing portfolio focused on deep technical content across a broad spectrum of technologies. Over the course of your subscription you will also see the service evolve to include additional features and functionality to enrich your learning experience. Closed captioning is available for courses presented in English.

Contact your Technical Account Manager (TAM) to learn more about Workshop Library on-demand and how to align it to your training needs.
