Customize your data collection

Link extra windows to any Great Plains form, even those from third-party products. With a choice of field types, you can fine-tune your interface to capture the data you need.

Optimize your data entry

Great Plains Extender puts you in control, letting you add lookups, create templates, and easily collect additional information pertinent to your business.

Increase visibility into data

View your data in infinite combinations and formats. You can consolidate information from any Microsoft Great Plains or third-party table, seeing relevant details and data subsets on demand.

Customize your lookups

Use Great Plains Extender to create lookups that are custom-tailored to your industry and your needs. Lookups let you view the data that matters, at the place and time you specify—no matter where it resides.

Optimize your analysis

SQL views simplify the process of retrieving data and preparing it for third-party reporting applications. Export views to Microsoft Office Excel for reuse elsewhere.

FEATURES OVERVIEW

Great Plains Extender Windows	Assign multiple windows to any form and get instant access to lookups and subforms as you work. Easily attach new data entry windows, notes windows, and even new inquiry windows to existing Great Plains windows without writing a line of code.
Automation and Navigation	Great Plains Extender makes data entry and navigation fast and intuitive. Automatically open and close extra windows as you navigate through a form, and apply window templates to set default values for fields.
Great Plains Extender Notes	Track specific issues by attaching multiple notes to any Microsoft Great Plains window. You can export notes to Excel and also build note-based inquiries.
Great Plains Extender Views	Great Plains Extender offers consolidated views of information from Great Plains tables and Great Plains Extender windows, combining them into a concise, comprehensible format. These easy reporting options are useful when you want to use Great Plains Extender data with reporting packages such as Crystal Reports.
Great Plains Extender XML Import/Export	Great Plains Extender harnesses the power of XML integration to maximize data portability. You can export Great Plains Extender setup configuration data to an XML file to share both the data and the display commands with other XML-compliant applications. Likewise, you can import XML files to deliver Great Plains Extender solutions through the interface of your choice.
