

Explore your IT world

Movere provides a **customizable, guided exploration** of your IT world.

MOVERE
POWERED BY UNIFIED LOGIC

The Movere platform brings together the raw data of your business world into one place where you can analyze, associate, deduce, and forecast for any project today and in the future.

Your Cloud or On-Premises Data

+

Movere Capture

=

- ✓ Cloud Readiness
- ✓ Cloud Consumption
- ✓ Licensing Compliance
- ✓ Optimization and Mapping
- ✓ Linux Captures

TAKE A TOUR

Objective

From the moment the data is gathered, until the moment it's presented, your data stays completely untouched by human interaction – it stays pure and objective.

Subjective

Movere allows you to curate your data any way you'd like. Since you know your infrastructure best, you become the explorer of your IT environment, gaining new insights everywhere you look.

Associative Dimensioning

Leverage platform mashups to do your analysis – no need to step in and out. Never join data manually again. Find intersections and overlay multiple filters within your data in any order you choose.

Consumption Data

Movere gives you 4D visibility to objectively and accurately measure your consumption data from all your devices. Based on standard deviation, Movere recommends optimal sizing to maximize your capacity.

Movere was designed to help IT leaders gain comprehensive visibility into their IT environments, to help you with the following tasks:

- Cloud sizing
- Cloud readiness
- Office 365 Administration
- ARC visualization
- Security
- SQL Server CAL Counting
- Device counts by country
- Application dependency mapping
- Visualizations
- What's installed for all vendors
- Hardware refresh
- SQL optimization and database mapping
- Virtualization mapping, integration and high watermarking (HWM)
- Linux captures

“Having the ability to look at what was installed prepared us for our move to the cloud and made the transition smoother.”

Movere Offers:

Insights: Movere is a research platform that automates data from your infrastructure and generates visuals based on billions of data points; everything you need to **free-up hidden capacity**.

Strength: Movere is an all-in-one solution that **fast tracks a wide range of projects easily**: from cloud migration to SQL optimization; capacity planning to application dependency mapping; predictive analytics to Office 365 administration.

Speed: Movere's inventory is flexible and lightweight allowing for rapid deployment, so customers can be working with accurate, real-time data immediately.

Filters: Movere's "objective data capture", "subjective custom tagging" and "associative dimensioning" provide the ability to quickly create unlimited nestable dimensions specific to your needs.

Transparency: Movere democratizes data giving customers the ability to interact with the platform collaboratively, intuitively and securely.

Smarts: The Movere team has a passion for **keeping up with what's new** in the world and are equally excited about sharing our knowledge past, present and future with others.

"By simply filtering on users whose access to Office 365 had been blocked, the customer was able to identify \$421,000 worth of Project and Visio subscriptions alone that could be reassigned to users."

SQL Server Utilization

"The customer identified over \$700k of SQL deployments being unnecessarily kept online."

Azure TCO on premise vs. actual usage

"Using Movere's ARC allowed us to free up capacity and realize significant savings with our move to the cloud."
