

MOVERE

POWERED BY UNIFIED LOGIC

Today's Business Pain Points

Planning to move capacity to the Cloud but concerned about what **it will cost, what it will take, and what are the risks?**

Implemented Office 365 but can't adequately track usage?

Need an **easy-to-access view of what's installed** on all your servers, workstations, Linux devices?

Want to have access to a **universal view of your infrastructure**, both on-premise and in the Cloud?

Running out of server space? Want to find ways to **optimize before buying more hardware and licenses?**

Meet Movere

Collect: Movere collects your IT data securely and quickly using a lightweight deployment. Our proprietary technology works from within your secure infrastructure to fully and securely understand your environment in a matter of minutes. Movere captures inventory data on 800 to 1,000 servers per hour. Most users finish the initial data collection in a *single* day.

Integrate: Movere scans across the globe and across locations to bring over 1,000 data points into a single, consolidated, unbiased location. Our proprietary technology gives deep insights into the actual architecture of your systems and data, which can daylight systems that may not have been cataloged by previous inventory exercises.

Interact: The Movere web interface allows you to interact with your IT data using personalized category tagging. Unlike any other tool, Movere allows you to group your users, machines, and devices in ways that make sense for how your organization is actually built.

Optimize: With Movere's insights, you have the power to optimize your on-premises, hybrid, or cloud IT environment. We're just as comfortable in tracking and understanding actual resource consumption (ARC) in on-premise environments as in the cloud, allowing you to financially and structurally optimize your environment for today's planning and tomorrow's transformation.

The Value of Movere

Cloud – gather inventories, compare capacities, usage, licensing, hardware, assess Azure readiness

Cost savings – identify underutilized software and overspending, automated auditing vs. manual, optimizing IT infrastructure

Visibility – insights into environment to inform business decisions

Compliance – being legally compliant with license agreements

Capacity planning – Forecast sunseting software, plan for new purchases, asset capacity planning

Change management – understand what is changing over time.

Improved customer support – Know who has what – and why, be more proactive in servicing accounts/end users

Security & control – understanding who and what is attached to the network; see the trees from the forest.

The Movere platform:

Cloud readiness

Cloud right sizing

Office 365 administration

Azure sizing

SQL Server CAL counting

Security

Device counts by country

Application dependency mapping

ARC Visualizations

What's installed for all vendors

Hardware refresh

SQL optimization

Oracle deployments

Linux captures

Virtualization mapping, integration and high watermarking (HWM)

Why Movere?

Movere is a research platform that automates data from your infrastructure and generates visuals based on billions of data points; everything you need to **free-up hidden capacity**.

Movere is an all-in-one solution that **fast tracks a wide range of projects easily**: from cloud migration to SQL optimization; capacity planning to application dependency mapping; predictive analytics to Office 365 administration.

Movere's inventory is **flexible and lightweight allowing for rapid deployment**, so customers can be working with accurate, real-time data immediately.

Movere's “objective data capture”, “subjective custom tagging” and “associative dimensioning” provide the ability to quickly **create unlimited nestable dimensions** specific to your needs.

Movere **democratizes data** giving customers the ability to interact with the platform collaboratively, intuitively and securely.

The Movere team has a passion for **keeping up with what's new** in the world and are equally excited about sharing our knowledge past, present and future with others.
