

Windows 8.1 Enterprise

The Choice for Today's Modern Mobile Experience

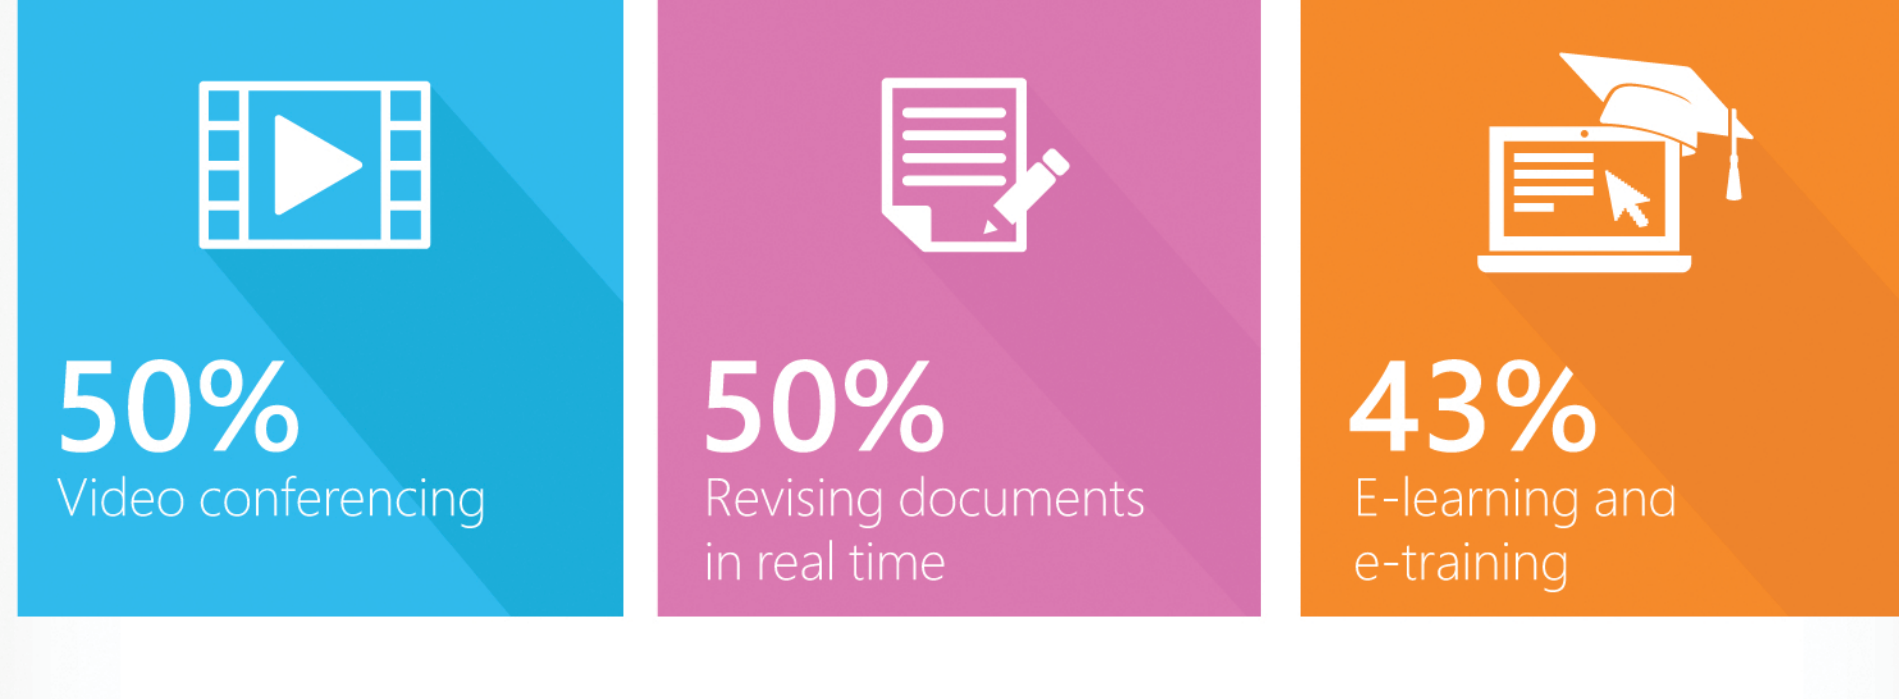

With users calling for any time, anywhere connectivity and the ability to access critical business data and core productivity tools across multiple devices of their choosing, the stakes around corporate computing have never been higher. To meet these next-generation demands, IT organizations need an enterprise platform that can deliver on the productivity requirements of the modern work place, while allowing IT to maintain stringent standards around security and manageability.

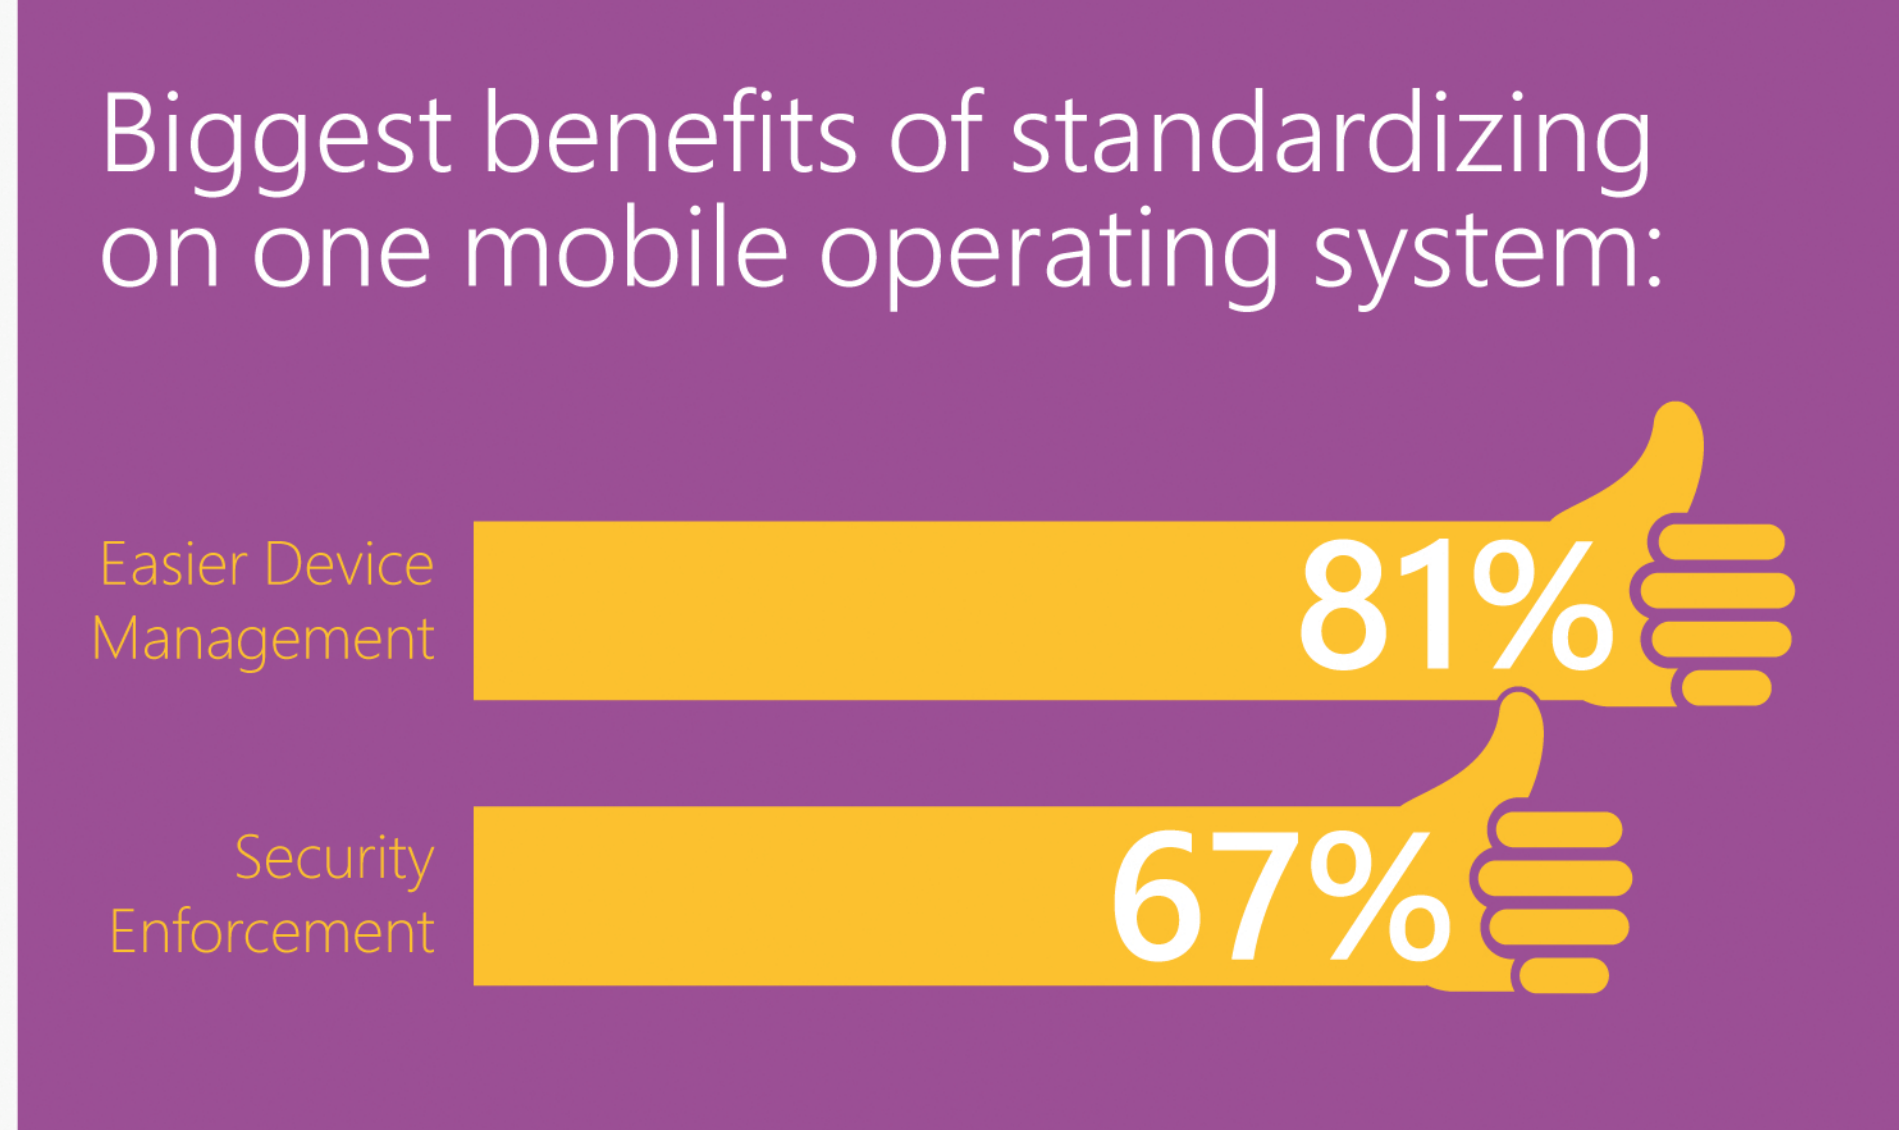

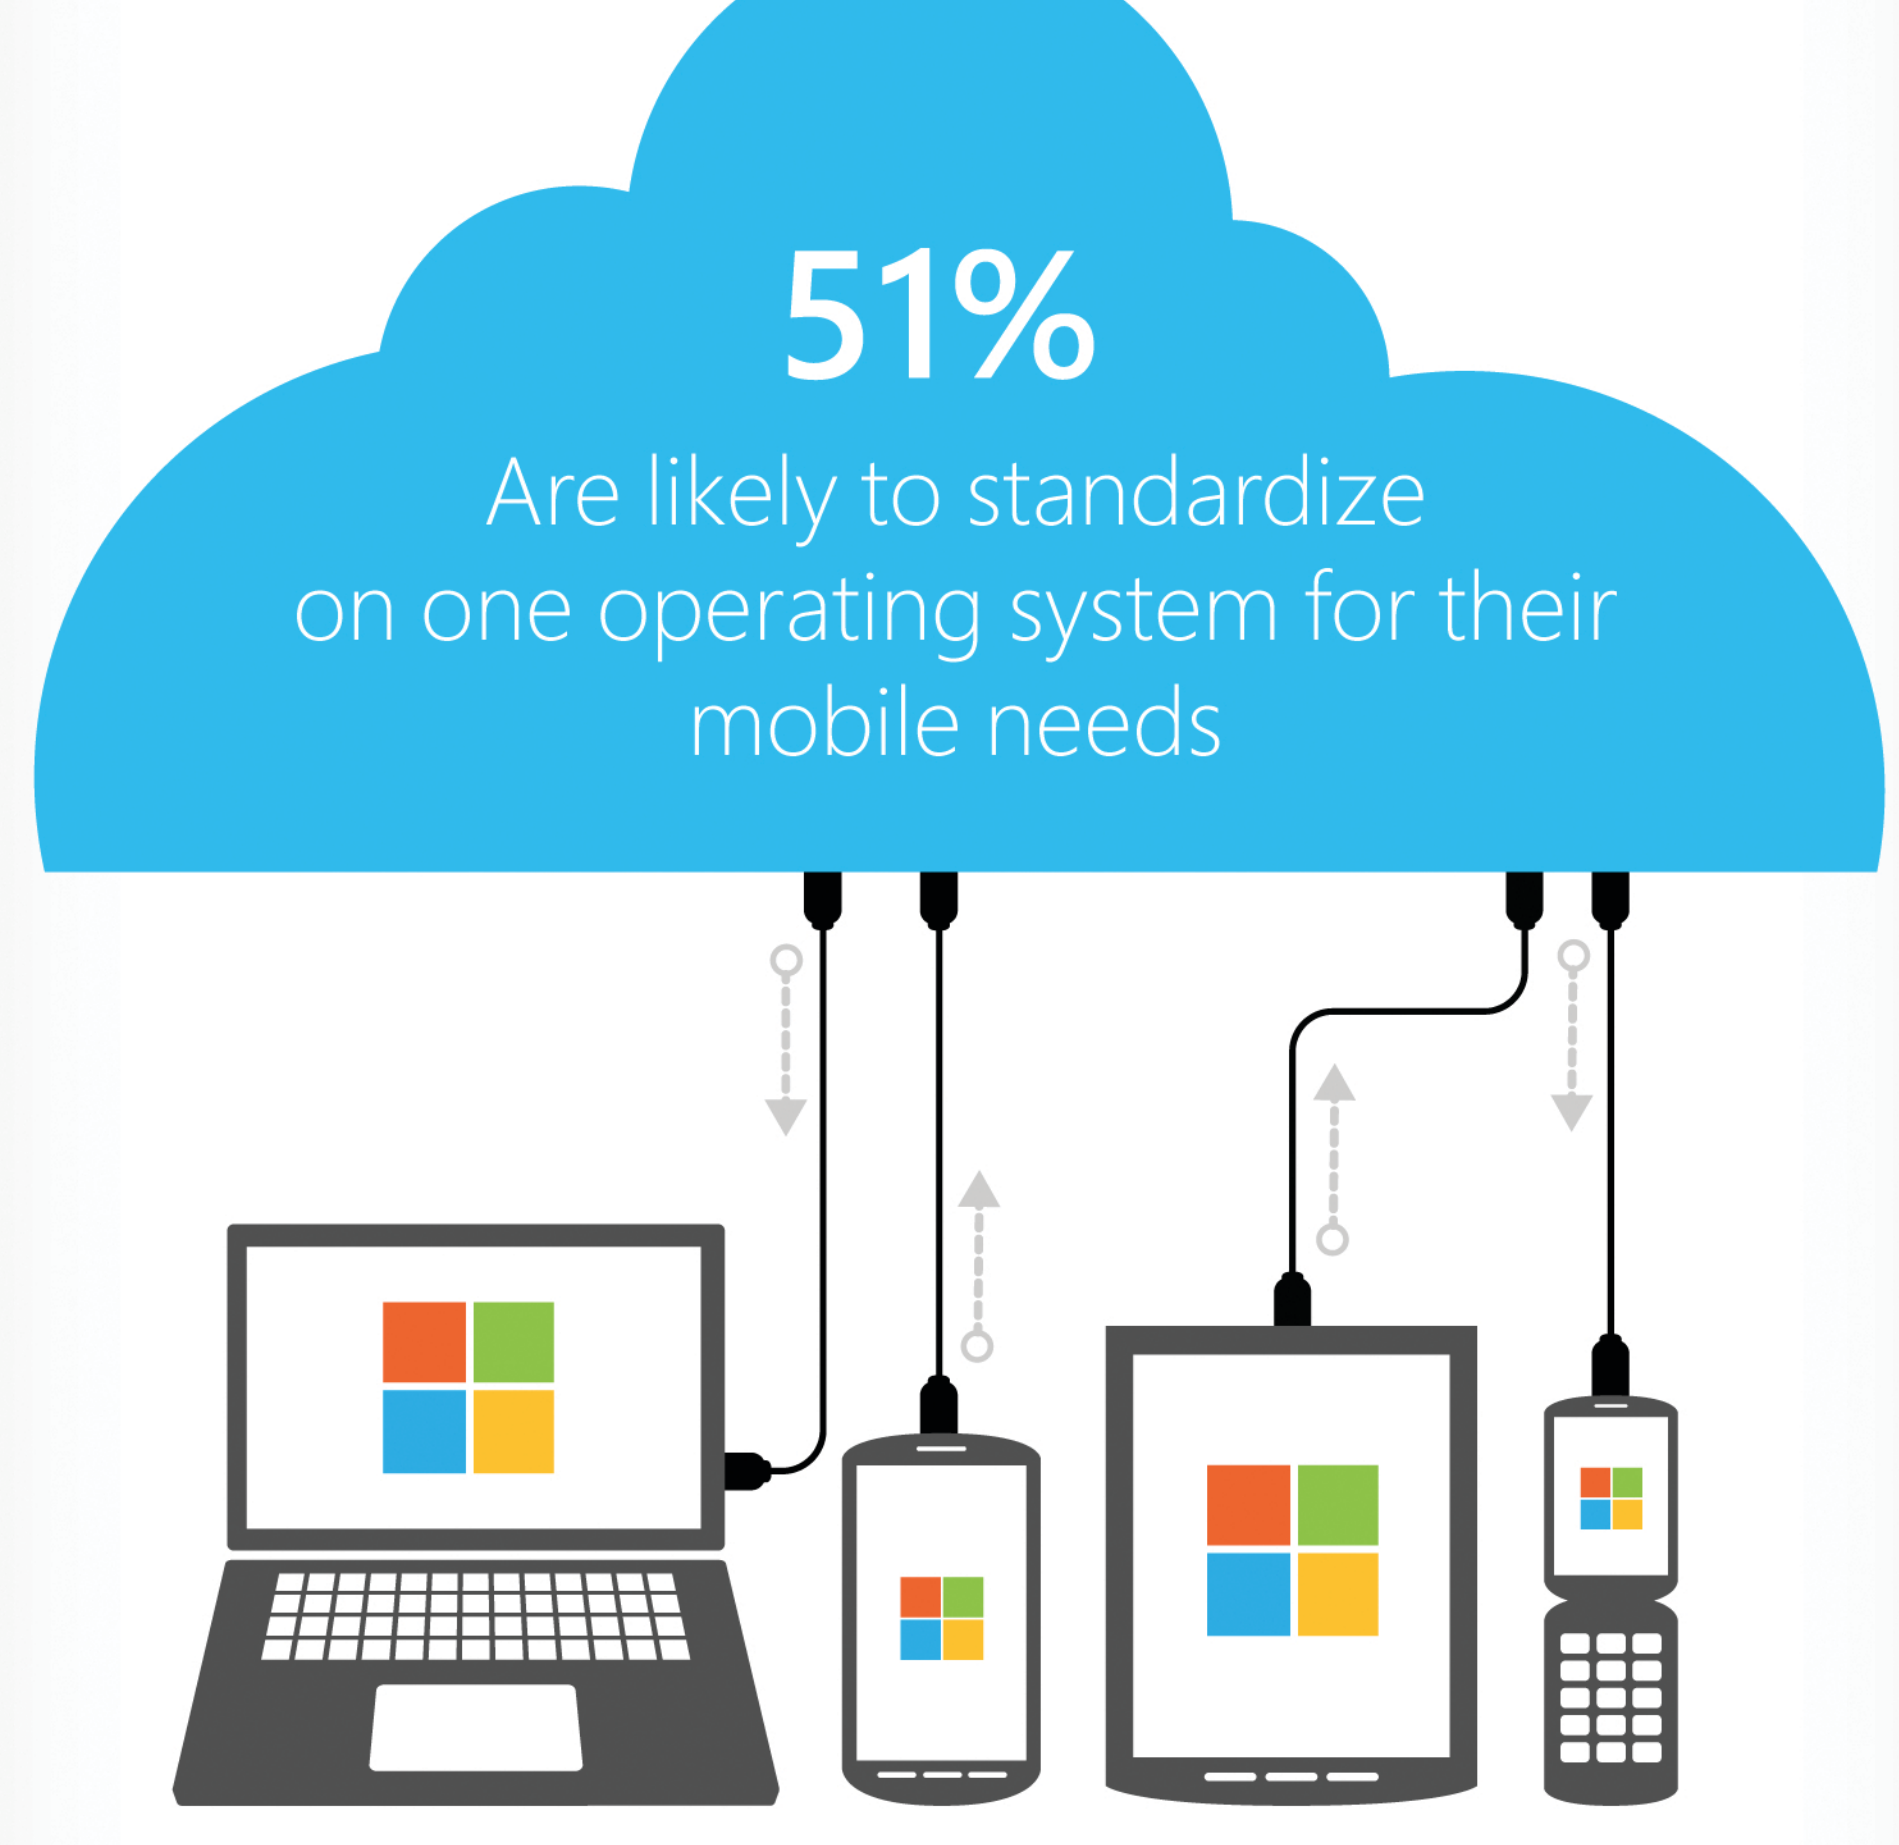

Consider:

Most common uses of mobile technology over the next year:

Top mobility challenges:

Windows 8.1's enterprise-grade foundation sets the stage for modern-day business computing by addressing five key areas:

- 1 Best-in-class business tablets and PCs
- 2 Productive and connected mobility
- 3 Windows apps for businesses
- 4 Empowering BYOD
- 5 Enterprise-grade Security

Windows 8.1 delivers a touch-first experience for users hungry for the convenient interface championed by mobile devices, yet it offers full support for a keyboard and mouse.

Windows 8.1 is stocked with a wealth of capabilities that make connecting to the Internet, office printers, projectors and other devices a seamless experience.

The growing array of new Windows business apps range from expense reporting tools to business intelligence dashboards to custom line-of-business apps targeted to specific vertical industries.

Windows 8.1 provides robust enterprise management technologies for corporate devices, while also facilitating BYOD scenarios with such capabilities as expanded support for third-party Mobile Device Management (MDM).

Designed with enterprise security needs in mind, Windows 8.1 incorporates new capabilities in the areas of biometrics, malware protection and encryption to ensure corporate data is properly protected.
