

Comprehensive and practical guidance for optimizing your IT security program

Microsoft Services

Potential Benefits

- Gain a comprehensive and consolidated view of your existing security programs
- Improve your overall security posture by implementing an actionable roadmap with specific steps to meet your business and security needs
- Enhance your program by working with experienced Microsoft specialists to learn up-to-date policies, practices, and technologies

Microsoft Security Risk Assessment

Is your current IT security program effective? Do your IT program's policies, practices, and technologies harden your organization against current and future security threats?

Security Challenges

Developing an effective IT security program can be a daunting challenge. Your security program must protect important data and systems, while mitigating the most likely and dangerous threats. You are expected to constantly keep this program updated and promote a security approach that accounts for business priorities, drifting security controls and new attack techniques. All of this must be done at a reasonable cost and with minimal disruption to the business. The Microsoft Security Risk Assessment (MSRA) is designed to help overcome the challenges of creating an effective security program.

Microsoft Security Risk Assessment

MSRA is a two week engagement designed to help gauge the effectiveness of your security program by evaluating your current security posture. Through on-site, in-person interviews and technical examination, MSRA results in the creation of a roadmap that is customized to your business. This roadmap accounts for your organization's resources and tolerance for change, and harnesses planned IT upgrades wherever possible. It also captures opportunities for security to contribute to new business areas and reduce the cost of compliance.

MSRA Solution Details

Planning

Review objectives, identify customer focus areas, and schedule on-site interviews.

Data Collection

Conduct on-site interviews to gather goals, policies, technologies, and practices across your security program(s).

Analysis

Analyze interview results and compare against Microsoft Cybersecurity Infrastructure Optimization Maturity Model. Prepare your roadmap based on criticality and impact of the findings.

Reporting

Create written report and provide Executive Briefing summarizing findings and roadmap.

Deliverables

Tailored Security Program Recommendations, Executive Briefing, Roadmap, Plan and Associated Estimate

Why Microsoft Services

Comprehensive Approach

With comprehensive Security and Identity services across strategy and planning, implementation and ongoing support, we can help your business implement seamless, consistent solutions that align with your strategic goals.

Unparalleled Access

With direct access to product development teams, we can take advantage of our security and identity products' latest capabilities to create, integrate and optimize solutions that help protect your business and drive innovation.

Highly Skilled Resources

Trusted to help protect the world's largest organizations and on the forefront in the fight against cybercrime, our diverse group of technical professionals are highly trained experts offer you a wealth of security and identity experience.
