

## Backup Operations Service for Microsoft Office SharePoint Server 2007

### with Data Protection Manager 2007

*Effective backup and recovery operations strategy for Microsoft Office SharePoint Server*

**Protect the content in your Microsoft Office SharePoint farms, and recover data quickly and reliably.**

The Microsoft Services Backup Operations Service for Microsoft Office SharePoint Server 2007 with Data Protection Manager 2007 helps you to:

- Use your test environment to evaluate a more effective, rapid and reliable strategy to backup and recover the data in your SharePoint Server 2007 farms.
- Properly plan the architecture and design your environment for a successful Backup Operations Service enterprise implementation.
- Execute successful implementation.

Today's business climate is more challenging than ever and businesses are under constant pressure to lower costs while improving overall operational efficiency. In short, businesses are being asked to do more for less. One way to help enterprises of all sizes reduce costs and improve business agility is to change the way data protection is implemented by deploying Microsoft® System Center Data Protection Manager 2007 (DPM 2007) which protects their Microsoft Office SharePoint® Server 2007 farms. Prior to the release of DPM 2007, Office SharePoint Server lacked an integrated, rapid, and reliable recovery solution. DPM 2007 is the new standard for data protection of Office SharePoint Server farms, delivering continuous data protection using seamlessly-integrated disk and tape media. DPM 2007 provides rapid and reliable recovery through advanced technology for enterprises of all sizes.

## Operate and Optimize Support and Health

The Backup Operations Service for Microsoft Office SharePoint Server 2007 with Data Protection Manager 2007 Service Offering is a consulting service offering that will help you to validate, envision, and plan the architecture and the design for an effective, rapid, and reliable recovery of your Office SharePoint Server farms. This service Offering defines a strategy to align with your service-level requirements by using Microsoft Services best practices for planning the architecture, design, and implementation. The Backup Operations Service Offering combines three services that can be progressively followed: proof of concept, architecture and design, and implementation planning and execution. The proof of concept service validates your requirements in a test environment prior to starting the other services. The proof of concept is not dependent on the other services and can be performed independently based on your requirements. The implementation planning and execution service follows the architecture and design service and is dependent on the deliverables from the architecture and design service.

## Dedicated and Determined to Deliver

Microsoft Services is at the forefront of what's possible with Microsoft technology. We are determined to realize and support your business vision. We deliver solutions that have impact, through integrated relationships with you, our partners, and teams across Microsoft.
