# Italy

The statistics presented here are generated by Microsoft security programs and services running on computers in Italy in 4Q15 and previous quarters. This data is provided from administrators or users who choose to opt in to provide data to Microsoft, using IP address geolocation to determine country or region.

On computers running real-time security software, most attempts by malware to infect computers are blocked before they succeed. Therefore, for a comprehensive understanding of the malware landscape, it's important to consider infection attempts that are blocked as well as infections that are removed. For this reason, Microsoft uses two different metrics to measure malware prevalence:

- *Encounter rate* is simply the percentage of computers running Microsoft real-time security products that report a malware encounter, whether the infection attempt succeeds or not.
- *Computers cleaned per mille*, or *CCM*, is an infection rate metric that is defined as the number of computers cleaned for every 1,000 unique computers executing the Malicious Software Removal Tool (MSRT), a free tool distributed through Microsoft update services that removes more than 200 highly prevalent or serious threats from computers.

Infection rate statistics for Italy

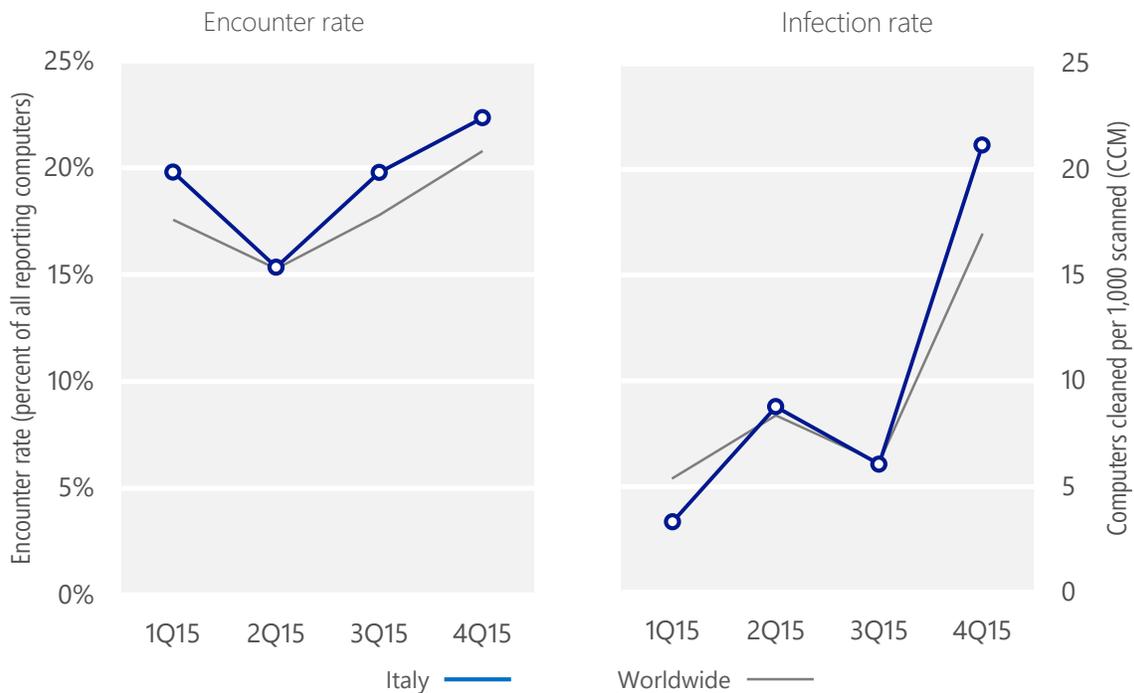

Metric	1Q15	2Q15	3Q15	4Q15
Encounter rate, Italy	19.8%	15.3%	19.8%	22.3%
<i>Worldwide encounter rate</i>	<i>17.6%</i>	<i>15.3%</i>	<i>17.8%</i>	<i>20.8%</i>
CCM, Italy	3.3	8.8	6.1	21.1
<i>Worldwide CCM</i>	<i>5.4</i>	<i>8.4</i>	<i>6.1</i>	<i>16.9</i>

Encounter and infection rates reported here do not include totals for the Brantall, Filcout, and Rotbrow malware families. See pages 57–64 of [Microsoft Security Intelligence Report, Volume 17](#) for an explanation of this decision.

## Encounter and infection rate trends

In 4Q15, 22.3% of computers in Italy encountered malware, compared to the 4Q15 worldwide encounter rate of 20.8 percent. In addition, the MSRT detected and removed malware from 21.1 of every 1,000 unique computers scanned in Italy in 4Q15 (a CCM score of 21.1, compared to the 4Q15 worldwide CCM of 16.9). The following figure shows the encounter and infection rate trends for Italy over the last four quarters, compared to the world as a whole.

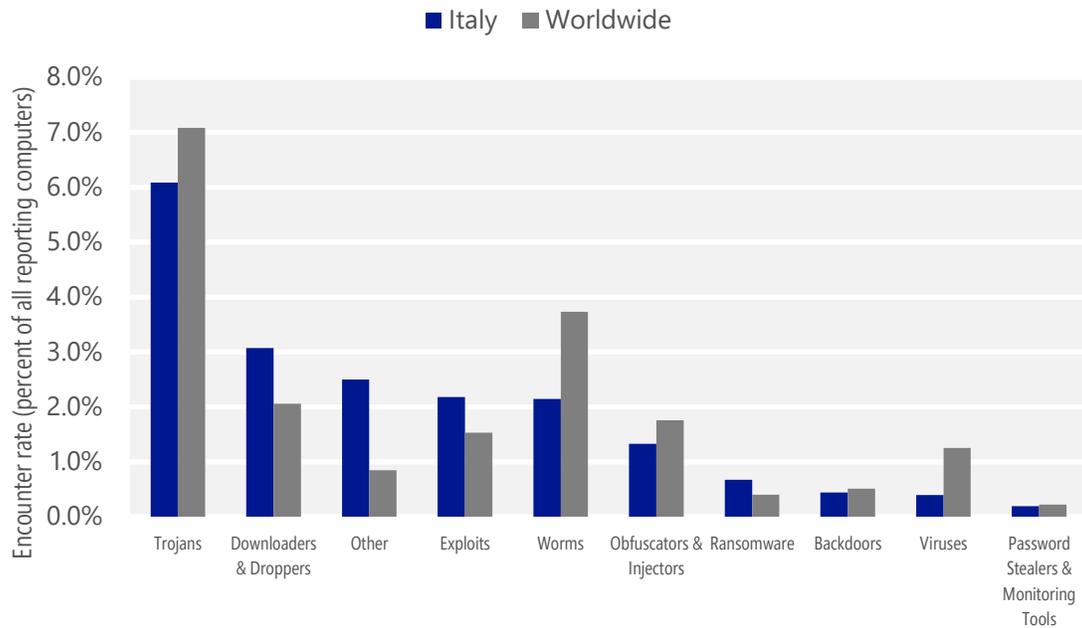

Malware encounter and infection rate trends in Italy and worldwide

See the Worldwide Threat Assessment section of [Microsoft Security Intelligence Report, Volume 20](http://www.microsoft.com/sir) at [www.microsoft.com/sir](http://www.microsoft.com/sir) for more information about threats in Italy and around the world, and for explanations of the methods and terms used here.

## Malware categories

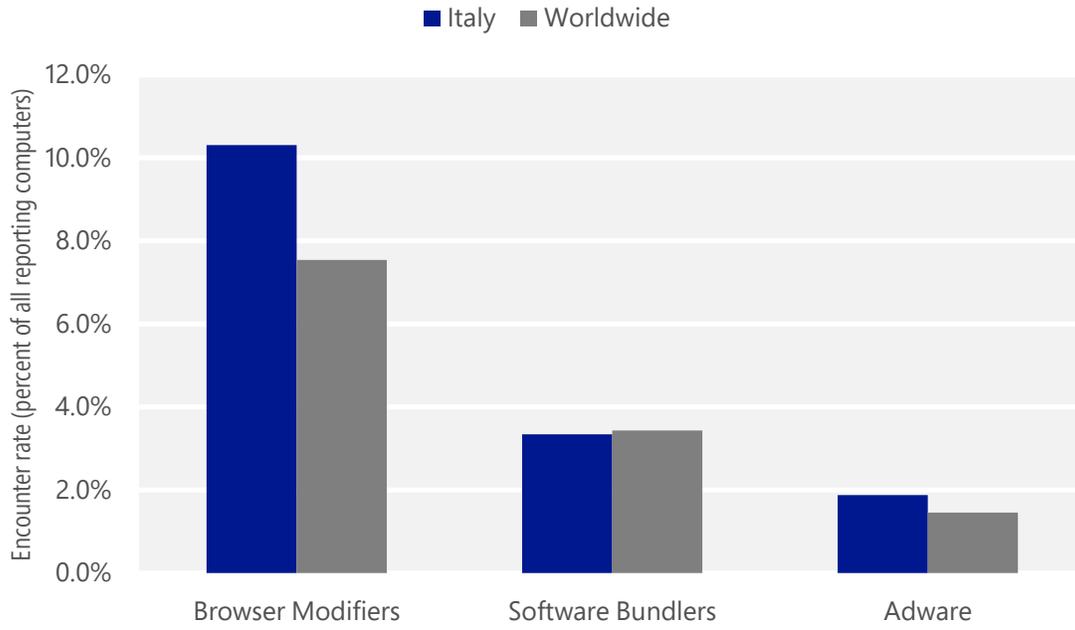

Malware encountered in Italy in 4Q15, by category

- The most common malware category in Italy in 4Q15 was Trojans. It was encountered by 6.1 percent of all computers there, down from 6.8 percent in 3Q15.
- The second most common malware category in Italy in 4Q15 was Downloaders & Droppers. It was encountered by 3.1 percent of all computers there, up from 2.6 percent in 3Q15.
- The third most common malware category in Italy in 4Q15 was Exploits, which was encountered by 2.2 percent of all computers there, up from 1.5 percent in 3Q15.

## Unwanted software categories

Unwanted software encountered in Italy in 4Q15, by category

- The most common unwanted software category in Italy in 4Q15 was Browser Modifiers. It was encountered by 10.3 percent of all computers there, down from 11.6 percent in 3Q15.
- The second most common unwanted software category in Italy in 4Q15 was Software Bundlers. It was encountered by 3.3 percent of all computers there, up from 2.9 percent in 3Q15.
- The third most common unwanted software category in Italy in 4Q15 was Adware, which was encountered by 1.9 percent of all computers there, up from 1.9 percent in 3Q15.

## Top malware families by encounter rate

The most common malware families encountered in Italy in 4Q15

	Family	Most significant category	% of reporting computers
1	<a href="#">JS/Axpergle</a>	Exploits	1.7%
2	<a href="#">Win32/Dynamer</a>	Trojans	0.9%
3	<a href="#">Win32/Dorv</a>	Trojans	0.9%
4	<a href="#">Win32/Peals</a>	Trojans	0.8%
5	<a href="#">Win32/Sventore</a>	Downloaders & Droppers	0.8%
6	<a href="#">Win32/Obfuscator</a>	Obfuscators & Injectors	0.8%
7	<a href="#">Win32/Skeeyah</a>	Trojans	0.7%
8	<a href="#">ASX/Wimad</a>	Downloaders & Droppers	0.6%
9	<a href="#">Win32/Gamarue</a>	Worms	0.6%
10	<a href="#">Win32/Conficker</a>	Worms	0.5%

- The most common malware family encountered in Italy in 4Q15 was [JS/Axpergle](#), which was encountered by 1.7 percent of reporting computers there. [JS/Axpergle](#) is a detection for the Angler exploit kit, which exploits vulnerabilities in some versions of Internet Explorer, Silverlight, Adobe Flash Player, and Java to install malware.
- The second most common malware family encountered in Italy in 4Q15 was [Win32/Dynamer](#), which was encountered by 0.9 percent of reporting computers there. [Win32/Dynamer](#) is a generic detection for a variety of threats.
- The third most common malware family encountered in Italy in 4Q15 was [Win32/Dorv](#), which was encountered by 0.9 percent of reporting computers there. [Win32/Dorv](#) is a generic detection for a variety of threats.
- The fourth most common malware family encountered in Italy in 4Q15 was [Win32/Peals](#), which was encountered by 0.8 percent of reporting computers there. [Win32/Peals](#) is a generic detection for various threats that display trojan characteristics.

## Top unwanted software families by encounter rate

The most common unwanted software families encountered in Italy in 4Q15

	Family	Most significant category	% of reporting computers
1	<a href="#">Win32/SupTab</a>	Browser Modifiers	4.0%
2	<a href="#">Win32/Diplugem</a>	Browser Modifiers	3.5%
3	<a href="#">Win32/OutBrowse</a>	Software Bundlers	0.9%
4	<a href="#">Win32/KipodToolsCby</a>	Browser Modifiers	0.9%
5	<a href="#">Win32/Pokki</a>	Browser Modifiers	0.8%

- The most common unwanted software family encountered in Italy in 4Q15 was [Win32/SupTab](#), which was encountered by 4.0 percent of reporting computers there. [Win32/SupTab](#) is a browser modifier that installs itself and changes the browser's default search provider, without obtaining the user's consent for either action.
- The second most common unwanted software family encountered in Italy in 4Q15 was [Win32/Diplugem](#), which was encountered by 3.5 percent of reporting computers there. [Win32/Diplugem](#) is a browser modifier that installs browser add-ons without obtaining the user's consent. The add-ons show extra advertisements as the user browses the web, and can inject additional ads into web search results pages.
- The third most common unwanted software family encountered in Italy in 4Q15 was [Win32/OutBrowse](#), which was encountered by 0.9 percent of reporting computers there. [Win32/OutBrowse](#) is a software bundler that installs additional unwanted programs alongside software that the user wishes to install. It can remove or hide the installer's close button, leaving no way to decline the additional applications.

## Top threat families by infection rate

The most common malware families by infection rate in Italy in 4Q15

	Family	Most significant category	Infection rate (CCM)
1	<a href="#">Win32/Diplugem</a>	Browser Modifiers	16.9
2	<a href="#">Win32/CompromisedCert</a>	Other Malware	0.9
3	<a href="#">Win32/Blakamba</a>	Trojans	0.8
4	<a href="#">Win32/Tugspay</a>	Downloaders & Droppers	0.6
5	<a href="#">Win32/Gamarue</a>	Worms	0.6
6	<a href="#">VBS/Jenxcus</a>	Worms	0.3
7	<a href="#">Win32/leEnablerCby</a>	Browser Modifiers	0.3
8	<a href="#">Win32/Peals</a>	Trojans	0.2
9	<a href="#">Win32/Conficker</a>	Worms	0.1
10	<a href="#">Win32/Reveton</a>	Ransomware	0.1

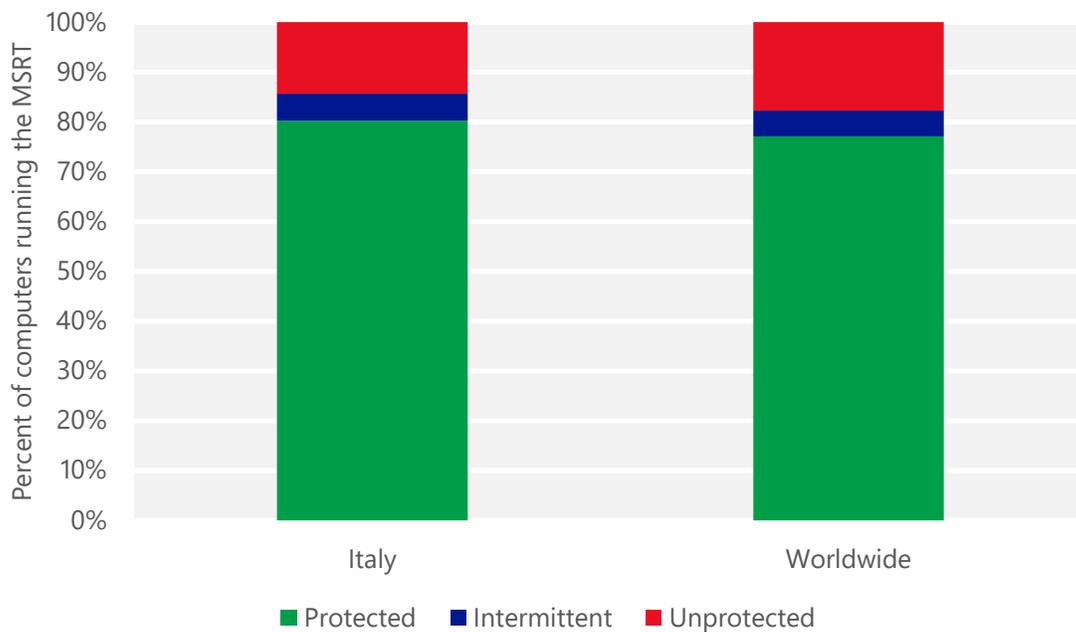

- The most common threat family infecting computers in Italy in 4Q15 was [Win32/Diplugem](#), which was detected and removed from 16.9 of every 1,000 unique computers scanned by the MSRT. [Win32/Diplugem](#) is a browser modifier that installs browser add-ons without obtaining the user's consent. The add-ons show extra advertisements as the user browses the web, and can inject additional ads into web search results pages.
- The second most common threat family infecting computers in Italy in 4Q15 was [Win32/CompromisedCert](#), which was detected and removed from 0.9 of every 1,000 unique computers scanned by the MSRT. [Win32/CompromisedCert](#) is a detection for the Superfish VisualDiscovery advertising program that was preinstalled on some Lenovo laptops sold in 2014 and 2015. It installs a compromised trusted root certificate on the computer, which can be used to conduct man-in-the-middle attacks on the computer.
- The third most common threat family infecting computers in Italy in 4Q15 was [Win32/Blakamba](#), which was detected and removed from 0.8 of every 1,000 unique computers scanned by the MSRT. [Win32/Blakamba](#) is a trojan that can download other malware. It has been observed being installed at the same time as [Win32/InstalleRex](#), a software bundler.
- The fourth most common threat family infecting computers in Italy in 4Q15 was [Win32/Tugspay](#), which was detected and removed from 0.6 of every 1,000 unique computers scanned by the MSRT. [Win32/Tugspay](#) is a downloader that spreads by posing as an installer for legitimate software, such as a Java update, or through other malware. When installed, it downloads unwanted software to the computer.

## Security software use

Recent releases of the MSRT collect and report details about the state of real-time antimalware software on a computer, if the computer's administrator has chosen to opt in to provide data to Microsoft. This telemetry data makes it possible to analyze security software usage patterns around the world and correlate them with infection rates.

A typical computer runs the MSRT three times each quarter, once for each monthly version of the tool that Microsoft releases. In the figure below, "Protected" represents computers that had real-time security software active and up-to-date every time the MSRT ran during a quarter; "Intermittently protected" represents computers that had security software active during one or more MSRT executions, but not all of them; and "Unprotected" represents computers that did not have security software active during any MSRT executions that quarter.

Percent of computers in Italy and worldwide protected by real-time security software in 4Q15

## Malicious websites

Attackers often use websites to conduct phishing attacks or distribute malware. Malicious websites typically appear completely legitimate and often provide no outward indicators of their malicious nature, even to experienced computer users. In many cases, these sites are legitimate websites that have been compromised by malware, SQL injection, or other techniques, in an effort by attackers to take advantage of the trust users have invested in them. To help protect users from malicious webpages, Microsoft and other browser vendors have developed filters that keep track of sites that host malware and phishing attacks and display prominent warnings when users try to navigate to them.

The information presented in this section has been generated from telemetry data produced by the SmartScreen Filter in Microsoft Edge and Internet Explorer. See the Worldwide Threat Assessment section of [Microsoft Security Intelligence Report, Volume 20](#) for more information about these protections and how the data is collected.

Malicious website statistics for Italy

Metric	3Q15	4Q15
Drive-by download pages per 1,000 URLs (Worldwide)	0.17 (0.22)	0.27 (0.57)
Phishing sites per 100,000 Internet users (Worldwide)	5.86 (4.7)	5.48 (3.9)
Malware hosting sites per 100,000 Internet users (Worldwide)	55.59 (56.2)	31.04 (26.4)
