

# Unbox datacenter innovation

with Windows Server 2016 Software-Defined solutions  
from your Windows Server partner

## The fastest route to the benefits of a software-defined datacenter

There's a lot to be gained in efficiency and simplicity by utilizing software-defined datacenter technology. But many IT organizations lack the time or staff to envision and implement new software-defined infrastructure.

Want the efficiency and simplicity of software-defined datacenter technology without having to design and implement it yourself? Validated software-defined datacenter solutions from preferred Microsoft partners can help you access these benefits faster.

Partners offer an array of Windows Server Software-Defined (WSSD) solutions that work with Windows Server 2016 to deliver high-performance storage or hyper-converged infrastructure. Hyper-converged solutions bring together compute, storage, and networking on industry-standard servers and components, which means organizations can gain improved datacenter intelligence and control while avoiding the costs of specialized high-end hardware.

### Partners offer three types of Windows Server Software-Defined (WSSD) solutions

<b>Software-Defined Storage (SDS)</b>	Enterprise-grade shared storage solution built on server node clusters replaces traditional SAN/NAS at a much lower cost. Organizations can quickly add storage capacity as needs grow over time. Support for all-flash NVMe drives delivers unrivaled performance.
<b>Hyper-converged Infrastructure (HCI) Standard</b>	Highly virtualized compute and storage are combined in the same server node cluster, making them easier to deploy, manage, and scale. By eliminating traditional IT compute, storage, and networking silos, you can simplify your infrastructure.
<b>Hyper-Converged Infrastructure (HCI) Premium</b>	Comprehensive "software-defined datacenter in a box" adds Software-Defined Networking and Security Assurance features to HCI Standard. This makes it easy to scale compute, storage, and networking up and down to meet demand just like public cloud services.

### Partner-driven solutions for your datacenter

All Windows Server Software-Defined partner solutions use Microsoft-validated designs and follow engineering best practices for seamless deployment and a steady-state operational experience. Your preferred Microsoft partner gets you up and running without lengthy design and build time and offers a single point of contact for implementation and support services.

### Validated by Microsoft

To earn certification by the Windows Server Software-Defined program, partners must meet the following Microsoft standards for solutions:

- Quality
- Accelerated time to value
- Out-of-the-box optimization
- Expedited problem resolution

## Unleash cloud efficiencies in your datacenter

With WSSD validated solutions, you can tap into the same types of cloud-efficiencies used to run hyper-scale datacenters such as Microsoft Azure. Windows Server 2016 includes many of the same technologies that Microsoft uses to support Azure.

## Unleash Windows Server 2016 features

**Security: Help protect against breaches.** All solutions offer built-in security features. Hyper-Converged Premium solutions add protection for virtual machines even if the host is compromised.

**Compute: Right-size resources.** Both hyper-converged solutions offer a Server Core option for host to help reduce resource usage and increase availability.

**Networking: Speed up changes.** All solutions take advantage of performance-enhancing networking technologies in Windows Server 2016. Hyper-Converged Premium solution adds software-defined networking features to help to automate workload deployment with virtualized switching, routing, load balancing and firewalls—no configuration changes to the physical network needed.

**Storage: Increase performance.** All WSSD solutions offer Storage Spaces Direct, which easily exceeds 150,000 mixed 4k random IOPS per server with consistent, low latency because the hypervisor embedded architecture, built-in read/write cache, and support for NVMe drives mounted directly on the PCIe bus.

**Management: Simplify it.** All WSSD solutions enable you to deploy and manage software-defined features across infrastructure using PowerShell and Microsoft System Center.

**Servers:** All WSSD solutions deliver a fully validated hardware platform.
