

Step Up Licenses

The cost effective way to move from one product edition to another

What is a Step Up License?

A Step Up License enables a customer to move from a lower level edition of a product to a higher level edition of a product without having to pay the full price for the higher level of the product. *For example*, a customer with an **eligible*** license of Microsoft Windows Server Standard edition could Step Up to Windows Server Enterprise Edition.

* Eligibility Criteria

- **Step-ups are available through Microsoft Open Value and Microsoft Open Value Subscription.**
- At the time the Step Up License is purchased, the Software Assurance for the qualifying underlying product must be active.
- The Step Up License must be acquired under the same Volume Licensing Program agreement under which the Software Assurance coverage for the qualifying product is active and current.
- Customers may not transfer the License for the qualifying underlying product separately from the Step-Up license.
- Rights under the Step Up license supersede and replace the underlying license for the qualifying product.
- **Important note:** Considering the scenario above, if a customer had Windows Server Standard, and then decided they needed to upgrade that server to Windows Server Enterprise, if they did not meet the criteria above, an entire new License of Windows Server Enterprise edition would be required to be purchased.

Step Up Pricing

How does Step Up pricing work? It's easy.

The Step-up price is simply the difference between the:

- License & Software Assurance price of the **higher** edition of the product *and the*
- License & Software Assurance price of the **lower** edition of the product

Frequently asked Questions:

Question: Can a customer who purchased Windows Server Standard Edition (License & Software Assurance) under a previous agreement and has since renewed Software Assurance on a current Open Value agreement now purchase a Step-up License?

Answer: Yes absolutely! As long as the customer has active Software Assurance on the Standard Edition software license, then they may purchase the Step-up License to Enterprise Edition.

Question: Once a customer has “stepped up” to the higher level of software product (i.e. from Windows Server Standard to Windows Server Enterprise), can they renew Software Assurance on the Windows Server Enterprise when it's time to sign up to a new agreement?

Answer: Yes absolutely! The customer can opt to renew Software Assurance coverage for the higher level edition they have stepped up to (in the example above they'd renew Software Assurance for Windows Server Enterprise edition).

Step-up Availability

The list of products for which step-up Licenses are available is subject to change. For the latest list of products please refer to the latest “Microsoft Product List” available on www.microsoft.com/licensing
