

# [MS-HVRS-Preview]:

## Hyper-V Remote Storage Profile

---

### Intellectual Property Rights Notice for Open Specifications Documentation

- **Technical Documentation.** Microsoft publishes Open Specifications documentation for protocols, file formats, languages, standards as well as overviews of the interaction among each of these technologies.
- **Copyrights.** This documentation is covered by Microsoft copyrights. Regardless of any other terms that are contained in the terms of use for the Microsoft website that hosts this documentation, you may make copies of it in order to develop implementations of the technologies described in the Open Specifications and may distribute portions of it in your implementations using these technologies or your documentation as necessary to properly document the implementation. You may also distribute in your implementation, with or without modification, any schema, IDL's, or code samples that are included in the documentation. This permission also applies to any documents that are referenced in the Open Specifications.
- **No Trade Secrets.** Microsoft does not claim any trade secret rights in this documentation.
- **Patents.** Microsoft has patents that may cover your implementations of the technologies described in the Open Specifications. Neither this notice nor Microsoft's delivery of the documentation grants any licenses under those or any other Microsoft patents. However, a given Open Specification may be covered by Microsoft [Open Specification Promise](#) or the [Community Promise](#). If you would prefer a written license, or if the technologies described in the Open Specifications are not covered by the Open Specifications Promise or Community Promise, as applicable, patent licenses are available by contacting [iplg@microsoft.com](mailto:iplg@microsoft.com).
- **Trademarks.** The names of companies and products contained in this documentation may be covered by trademarks or similar intellectual property rights. This notice does not grant any licenses under those rights. For a list of Microsoft trademarks, visit [www.microsoft.com/trademarks](http://www.microsoft.com/trademarks).
- **Fictitious Names.** The example companies, organizations, products, domain names, e-mail addresses, logos, people, places, and events depicted in this documentation are fictitious. No association with any real company, organization, product, domain name, email address, logo, person, place, or event is intended or should be inferred.

**Reservation of Rights.** All other rights are reserved, and this notice does not grant any rights other than specifically described above, whether by implication, estoppel, or otherwise.

**Tools.** The Open Specifications do not require the use of Microsoft programming tools or programming environments in order for you to develop an implementation. If you have access to Microsoft programming tools and environments you are free to take advantage of them. Certain Open Specifications are intended for use in conjunction with publicly available standard specifications and network programming art, and assumes that the reader either is familiar with the aforementioned material or has immediate access to it.

**Preliminary Documentation.** This Open Specification provides documentation for past and current releases and/or for the pre-release version of this technology. This Open Specification is final documentation for past or current releases as specifically noted in the document, as applicable; it is preliminary documentation for the pre-release versions. Microsoft will release final documentation in connection with the commercial release of the updated or new version of this technology. As the documentation may change between this preliminary version and the final version of this technology, there are risks in relying on preliminary documentation. To the extent that you incur additional

development obligations or any other costs as a result of relying on this preliminary documentation, you do so at your own risk.

# 1 Introduction

Microsoft Hyper-V supports virtual machines whose associated files are hosted on Server Message Block (SMB) Version 3 shares. These files can include virtual machine configuration files, virtual machine saved-state files, and virtual hard-disk files. The Hyper-V Remote Storage Profile clarifies the level of support that Hyper-V requires from SMB Version 3 servers that host these types of files.

## 1.1 Glossary

**MAY, SHOULD, MUST, SHOULD NOT, MUST NOT:** These terms (in all caps) are used as defined in [RFC2119]. All statements of optional behavior use either MAY, SHOULD, or SHOULD NOT.

## 1.2 References

Links to a document in the Microsoft Open Specifications library point to the correct section in the most recently published version of the referenced document. However, because individual documents in the library are not updated at the same time, the section numbers in the documents may not match. You can confirm the correct section numbering by checking the Errata.

### 1.2.1 Normative References

We conduct frequent surveys of the normative references to assure their continued availability. If you have any issue with finding a normative reference, please contact dochelp@microsoft.com. We will assist you in finding the relevant information.

[MS-FSA] Microsoft Corporation, "File System Algorithms".

[MS-FSCC] Microsoft Corporation, "File System Control Codes".

[MS-RSVD] Microsoft Corporation, "Remote Shared Virtual Disk Protocol".

[MS-SMB2] Microsoft Corporation, "Server Message Block (SMB) Protocol Versions 2 and 3".

[MS-SQOS] Microsoft Corporation, "Storage Quality of Service Protocol".

[RFC2119] Bradner, S., "Key words for use in RFCs to Indicate Requirement Levels", BCP 14, RFC 2119, March 1997, <http://www.rfc-editor.org/rfc/rfc2119.txt>

### 1.2.2 Informative References

None.

## 1.3 Microsoft Implementations

- Windows Server 2012 operating system
- Windows Server 2012 R2 operating system
- Windows Server 2016 Technical Preview operating system

## 1.4 Standards Support Requirements

The conformance requirements for [MS-SMB2], [MS-FSA], [MS-RSVD], and [MS-SQOS] are that all required portions of the specifications are implemented according to the specification, and any optional portions that are included are implemented according to the specification.

## 1.5 Notation

The following notations are used to identify clarifications in section 2.2:

Notation	Explanation
C####	This notation identifies a clarification of ambiguity in the target specification. This includes imprecise statements, omitted information, discrepancies, and errata. This does not include data formatting clarifications.

## 2 Standards Support Statements

### 2.1 Normative Variations

None.

### 2.2 Clarifications

The following subsections identify clarifications relative to [MS-SMB2], [MS-FSA], [MS-RSVD], and [MS-SQOS].

#### 2.2.1 [MS-SMB2] Server Message Block (SMB) Protocols Version 2 and 3

C0001:

Windows Server 2012 R2 operating system and Windows Server 2016 Technical Preview operating system

The server MUST support the SMB 3.0 or higher dialect, as described in [MS-SMB2] section 1.7.

C0002:

Windows Server 2012 R2 and Windows Server 2016 Technical Preview

The server MUST support persistent handles.

C0003:

Windows Server 2012 operating system, Windows Server 2012 R2 and Windows Server 2016 Technical Preview

The server MUST support the FSCTL\_LMR\_REQUEST\_RESILIENCY command.

#### 2.2.2 [MS-FSA] File System Algorithms

C0004:

Windows Server 2012, Windows Server 2012 R2 and Windows Server 2016 Technical Preview

If the server doesn't support the FSCTL\_OFFLOAD\_READ and FSCTL\_OFFLOAD\_WRITE commands, as specified in [MS-FSA] sections 2.1.5.9.18 and 2.1.5.9.19, then any small computer system interface (SCSI) ODX commands initiated by the virtual machine operating system fail.

If the server supports the FSCTL\_OFFLOAD\_READ and FSCTL\_OFFLOAD\_WRITE commands, then Hyper-V can issue these commands to optimize the performance of virtual disk creation, merge, compaction, and mirroring operations.

C0005:

Windows Server 2012, Windows Server 2012 R2, and Windows Server 2016 Technical Preview

If the server supports the FSCTL\_SET\_ZERO\_DATA command, as specified in [MS-FSA] section 2.1.5.9.36, then Hyper-V can issue this command to optimize the performance of virtual-disk-creation operations.

C0006:

Windows Server 2012, Windows Server 2012 R2, and Windows Server 2016 Technical Preview

If the server doesn't support the FSCTL\_FILE\_LEVEL\_TRIM command, as specified in [MS-FSA] section 2.1.5.9.5:

- Support for the SCSI UNMAP command is still advertised to the virtual machine operating system in the response to SCSI INQUIRY commands.
- SCSI UNMAP requests initiated by the virtual machine operating system are still completed successfully to the virtual machine operating system, but they have no side effects (they are not translated into corresponding file system requests to release space allocated to the files backing the virtual disks attached to the virtual machine).

C0007:

Windows Server 2016 Technical Preview

If the server advertises the FILE\_SUPPORTS\_BLOCK\_REFCOUNTING flag for a given Open (as defined in FILE\_FS\_ATTRIBUTE\_INFORMATION), the server must support the FSCTL\_DUPLICATE\_EXTENTS\_TO\_FILE command, as specified in [MS-FSA] section 2.1.5.9.4.

C0008:

Windows Server 2012, Windows Server 2012 R2, and Windows Server 2016 Technical Preview

Hyper-V doesn't support virtual disk files with any of the following flags set, as specified in [MS-FSCC] section 2.6:

- FILE\_ATTRIBUTE\_COMPRESSED
- FILE\_ATTRIBUTE\_ENCRYPTED
- FILE\_ATTRIBUTE\_SPARSE\_FILE

### **2.2.3 [MS-RSVD] Remote Shared Virtual Disk Protocol**

C0009:

Windows Server 2012 R2 and Windows Server 2016 Technical Preview

If the server doesn't support the Remote Shared Virtual Disk Protocol [MS-RSVD]:

- The operation of configuring a Hyper-V virtual machines to be attached to a remote shared virtual disk fails.
- The operation of starting a Hyper-V virtual machine configured to be attached to a remote shared virtual disk fails.

### **2.2.4 [MS-SQOS] Storage Quality of Service Protocol**

C0010:

Windows Server 2016 Technical Preview

If the server doesn't support the Storage Quality of Service Protocol [MS-SQOS], then any storage Quality of Service policies associated with the virtual disks of a Hyper-V virtual machine are ignored and never enforced. However, this doesn't prevent the virtual machine from successfully starting.

## **2.3 Error Handling**

None.

## 2.4 Security

None.

PREVIEW
