Bolivia

The statistics presented here are generated by Microsoft security programs and services running on computers in Bolivia in 2Q13 and previous quarters. This data is provided from administrators or users who choose to opt in to provide data to Microsoft, using IP address geolocation to determine country or region.

In previous volumes of the *Microsoft Security Intelligence Report*, malware prevalence was measured by *infection rate*, defined as the number of computers cleaned for every 1,000 executions of the Microsoft Malicious Software Removal Tool (*computers cleaned per mille*, or CCM). To provide a more accurate picture of the malware landscape, the CCM metric is being replaced by a measure of *encounter rate*, defined as the percent of computers running Microsoft real-time security products that detect malware each quarter.

The encounter rate for a population is typically much greater than its infection rate, because real-time security software blocks most malware before it can infect the computer. To help put encounter rates in context, this volume of the report includes data for both encounter rate and infection rate.

Infection rate statistics for Bolivia

Metric	3Q12	4Q12	1Q13	2Q13
CCM, Bolivia	9.4	9.4	7.6	10.7
<i>Worldwide average CCM</i>	5.3	6.0	6.3	5.8
Encounter rate, Bolivia	N/A	N/A	N/A	N/A
<i>Worldwide average encounter rate</i>	18.0%	17.5%	17.8%	17.0%

See the *Security Intelligence Report* website at www.microsoft.com/sir for more information about threats in Bolivia and around the world, and for explanations of the methods and terms used here.

Infection and encounter rate trends

The MSRT cleaned malware on 10.7 of every 1,000 computers scanned in Bolivia in 2Q13 (a CCM score of 10.7, compared to the 2Q13 worldwide average CCM of 5.8). In 2Q13, N/A percent of computers in Bolivia encountered malware, compared to the 2Q13 worldwide average of 21.7% percent. The following figure shows the infection and encounter rate trends for Bolivia over the last four quarters, compared to the world as a whole.

Malware infection and encounter trends in Bolivia and worldwide

Threat categories

Malware and potentially unwanted software categories in Bolivia in 2Q13, by percentage of computers reporting detections

- The most common category in Bolivia in 2Q13 was Worms. It was encountered by 21.0 percent of all computers there, up from 15.1 percent in 1Q13.
- The second most common category in Bolivia in 2Q13 was Miscellaneous Trojans. It was encountered by 12.2 percent of all computers there, up from 11.5 percent in 1Q13.
- The third most common category in Bolivia in 2Q13 was Viruses, which was encountered by 4.5 percent of all computers there, up from 4.5 percent in 1Q13.

Malicious websites

Attackers often use websites to conduct phishing attacks or distribute malware. Malicious websites typically appear completely legitimate and often provide no outward indicators of their malicious nature, even to experienced computer users. In many cases, these sites are legitimate websites that have been compromised by malware, SQL injection, or other techniques, in an effort by attackers to take advantage of the trust users have invested in them. To help protect users from malicious webpages, Microsoft and other browser vendors have developed filters that keep track of sites that host malware and phishing attacks and display prominent warnings when users try to navigate to them.

Web browsers such as Windows Internet Explorer and search engines such as Bing use lists of known phishing and malware hosting websites to warn users about malicious websites before they can do any harm. The information presented in this section has been generated from telemetry data produced by Internet Explorer and Bing. See the *Microsoft Security Intelligence Report* website for more information about these protections and how the data is collected.

Malicious website statistics for Bolivia

Metric	3Q12	4Q12	1Q13	2Q13
Phishing sites per 1,000 hosts (Worldwide)	N/A (5.47)	N/A (5.70)	3.59 (4.56)	3.59 (4.24)
Malware hosting sites per 1,000 hosts (Worldwide)	N/A (9.46)	N/A (10.85)	5.38 (11.66)	18.83 (17.67)
Drive-by download sites per 1,000 URLs (Worldwide)	0.01 (0.56)	0.02 (0.33)	0.01 (0.50)	0.02 (1.12)
