Important Health Warning About Playing Video Games

Photosensitive Seizures

A very small percentage of people may experience a seizure when exposed to certain visual images, including flashing lights or patterns that may appear in video games. Even people who have no history of seizures or epilepsy may have an undiagnosed condition that can cause these "photosensitive epileptic seizures" while watching video games.

These seizures may have a variety of symptoms, including lightheadedness, altered vision, eye or face twitching, jerking or shaking of arms or legs, disorientation, confusion, or momentary loss of awareness. Seizures may also cause loss of consciousness or convulsions that can lead to injury from falling down or striking nearby objects.

Immediately stop playing and consult a doctor if you experience any of these symptoms. Parents should watch for or ask their children about the above symptoms—children and teenagers are more likely than adults to experience these seizures. The risk of photosensitive epileptic seizures may be reduced by taking the following precautions: Sit or stand farther from the screen; use a smaller screen; play in a well-lit room; and do not play when you are drowsy or fatigued.

If you or any of your relatives have a history of seizures or epilepsy, consult a doctor before playing.

KEY GESTURES

Your body is the controller! In-game Video Tutorials will show you the gestures for each sport in Kinect Sports: Season Two, but use these two gestures to navigate selection screens.

HOLD TO SELECT

To make a selection, stretch your arm out and direct the on-screen pointer with your hand, hovering over a labelled area of the screen until it fills up.

SWIPE

To move through multiple pages of a selection screen (when arrows appear to the right or left), swipe your arm across your body.

GAME MENUS

To bring up the Pause menu, hold your left arm out diagonally at around 45° from your body until the Kinect Guide icon appears. Be sure to face the sensor straight on with your legs together and your right arm at your side. From this menu you can quit, restart, or access the Kinect Tuner if you experience any problems with the sensor (or press **Y** on an Xbox 360 controller if necessary).

The separate Settings menu can be accessed wherever you see the wrench icon. It allows you to make global setup changes, such as turning the in-game Video Tutorials on or off.

Select your avatar's nameplate to change the main profile or view your achievements.

GAME MODES

Select a Sport lets you single out a specific sport to play, either alone or with friends. Separate activities based on the sports can also be found here.

Quick Play gets you straight into the competitive sporting action. Split into two teams and nominate players for head-to-head battles while the game tracks your victories. Take on computer opponents if you're playing alone.

Challenges allow you to throw down the sporting gauntlet to friends and other profiles on your console even when they're not online. Pick a sport, send a challenge, and your chosen rival can try to beat your performance the next time they sign in.
