## **Omada launches Compliance Attestation Manager for greater efficiency and reduced costs**

San Francisco, April 9, 2008 – Omada, a leading Microsoft Solution Provider for Advanced Role Based Access Control (RBAC) and Compliance in Identity Management, today announced the availability of the enhanced Omada Compliance Attestation Manager beta that builds on the top of Microsoft Identity Lifecycle Manager 2007 (ILM 2007), while the final version is scheduled for the second half of 2008. The Manager enables enterprises to audit their access rights and user accounts with greater ease and efficiency.

“Omada’s Identity Manager Modules bring unique features to the enterprise for reducing user management costs through automation, promoting business efficiency through self service and strengthening data security through effective policies,” said Morten Boel Sigurdsson, CEO of Omada. “Whether deployed separately or as a complete solution, Omada will bring your business closer to compliance faster and more efficiently than ever before.”

The enhanced Omada Compliance Attestation Manager is part of the Omada Identity Manager Solution v7 that consists of seven compelling modules delivering enterprise-wide benefits within Identity Management. The Compliance Attestation Manager complements ILM 2007 by delivering a Self Service Business User Interface that automates attestation and validation and periodic audits.

“Omada’s solution helps customers gain great value from their Microsoft business applications, in this case, Microsoft Identity Lifecycle Manager,” said John “JG” Chirapurath, director of Identity and Access marketing at Microsoft. “Omada’s Identity Management solutions complement Microsoft’s strategy and products, which greatly benefits our mutual customers.”

To support their continued commitment to develop effective Compliance and Advanced RBAC solutions for enterprises, Omada recently appointed Dr. Martin Kuhlmann as their Lead Solution Consultant for the German, Austrian, and Swiss markets (DACH). Dr. Kuhlmann is an RBAC specialist who has pioneered one of the earliest concepts for role based administration and role mining and co-authored several scientific articles on Role Based Access Control in a community from which the National Institute of Standards and Technology (NIST) RBAC model emerged.

Omada is participating at the RSA® Conference in San Francisco from April 7<sup>th</sup> – 11<sup>th</sup>, 2008, with their kiosk at the Microsoft Partner Pavilion booth number 1517, where they will demonstrate features from the Omada Identity Manager solution.

### **About Omada Identity Manager**

Omada Identity Manager is a Microsoft based solution for Advanced Role Based Access Control and Compliance. The solution integrates seamlessly with various systems including Microsoft Identity Lifecycle Manager (ILM), Active Directory (AD), and ERP systems such as SAP, to deliver a complete modular solution for Identity Lifecycle Management and enable Enterprises to accomplish Compliance, Security, and Efficiency. These modules include:
