The 2007 Microsoft Office system
is a unified solutions platform for building
Office Business Applications that make Line-of-Business systems,
enterprise data and workflows accessible and relevant to users.

Consists of clients, servers, services and tools

Provides a single infrastructure for

Communication & collaboration

Business Intelligence

Content management solutions

Enables developers to bridge information gap between users and data in back-end enterprise systems
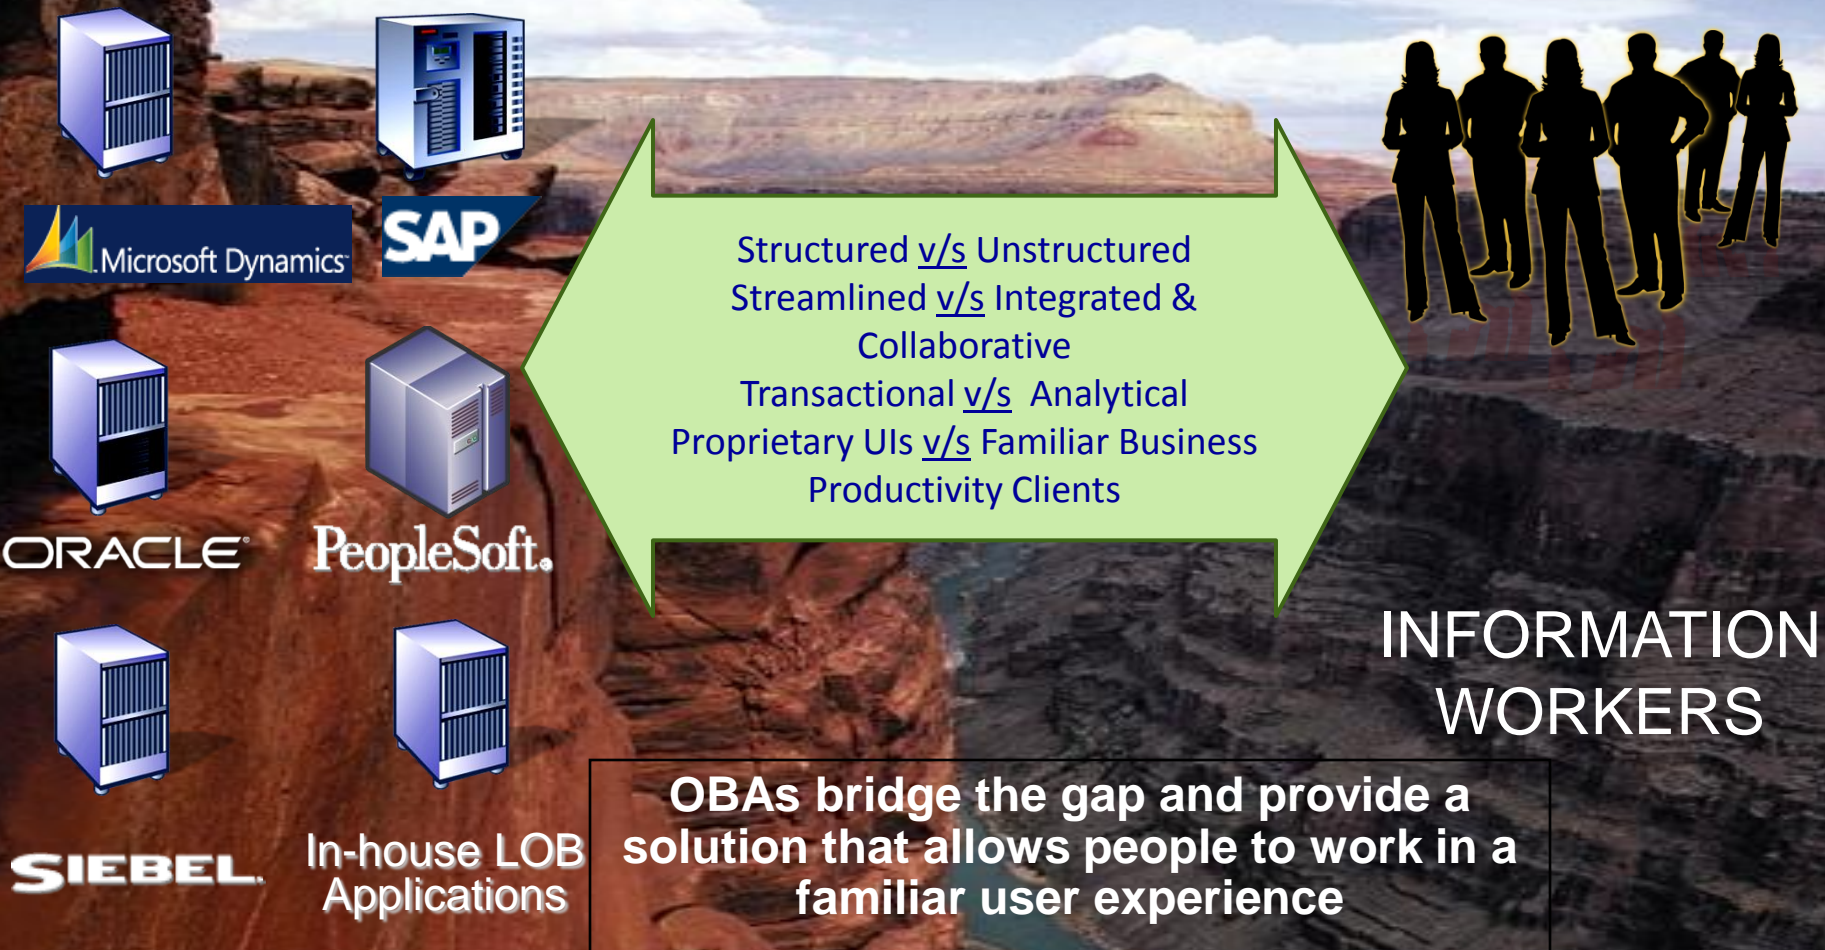

SQL Server, SAP, ERP, CRM, etc.

Business Issue

The Results Gap

Microsoft Dynamics

SAP

ORACLE

PeopleSoft.

SIEBEL

In-house LOB Applications

Structured <u>v/s</u> Unstructured
Streamlined <u>v/s</u> Integrated & Collaborative
Transactional <u>v/s</u> Analytical
Proprietary UIs <u>v/s</u> Familiar Business Productivity Clients

INFORMATION WORKERS

OBAs bridge the gap and provide a solution that allows people to work in a familiar user experience

Key VSTO Features

- Visual designers for key UI features
- Workflow & Microsoft SharePoint Support
- Data binding in Word Content Controls
- Application-level add-ins for most Office client apps (both 2003 & 2007)
- Document-level add-ins for Excel & Word 2007
- Improved deployment and security

The ActionsPane

- Document Actions task pane
  - Specific task pane available to document customizations (new in Word and Excel 2003+)
- ActionsPane
  - Programmable object exposed by VSTO 2008 from Excel Workbook and Word Document classes
  - Fully encapsulates an implementation of ISmartDocument
  - Provides a Windows Forms-based programming model for accessing the Document Actions task pane

Integration af LOB data i Word skabelon
