EU REACH Article 33 Disclosure

The European Union's REACH (**R**egistration, **E**valuation, **A**uthorization and **R**estriction of **C**hemicals) Regulation sets compliance requirements for manufacturers, importers, and downstream users of chemicals, including chemicals contained in articles and preparations, that are imported into the EU for distribution, sale, or use by third parties.

Under REACH Article 33, Microsoft is required to provide to a downstream recipient¹ or a consumer² relevant safe use information when both the following conditions are met:

- The substance is included in the Substances of Very High Concern (SVHC) Candidate List, and
- The substance is present in articles produced and/or imported above a concentration of 0.1% (w/w).

The information is to be provided to the downstream recipient when the article is supplied for the first time after the inclusion of the substance into the SVHC Candidate List and to the consumer, upon request by that consumer, within 45 calendar days of that request.

To determine if Microsoft devices contain SVHCs above the 0.1% w/w threshold, a Bill of Materials (BoM) analysis is conducted for each product and maintained to ensure Article 33 compliance based on the current ECHA SVHC List (240 substances/substance groups as of 23 January 2024). Below are the Article 33 disclosures for Microsoft's products which may be contained in the referenced product categories. In addition, the SCIP notification numbers are provided for each product category. SCIP is the database for information on Substances of Concern In articles as such or in complex objects (Products) established under the Waste Framework Directive (WFD).
