Agenda

Overview of the ESG value chain solution

Demo

- Deploy the solution
- Configure the solution
- Collect your value chain data

Q&A

- Please put questions in the chat

ESG value chain solution

The environmental, social, and governance (ESG) value chain solution enables you to gather data directly from your value chain partners and use that data to calculate your scope 3 emissions.

Qualitative data

How are you value chain partners doing on their sustainability goals?
Have they completed third party assurance?

Activity and emissions data

Collect emissions data from your value chain partners or gather their activity data and calculate their emissions yourself.

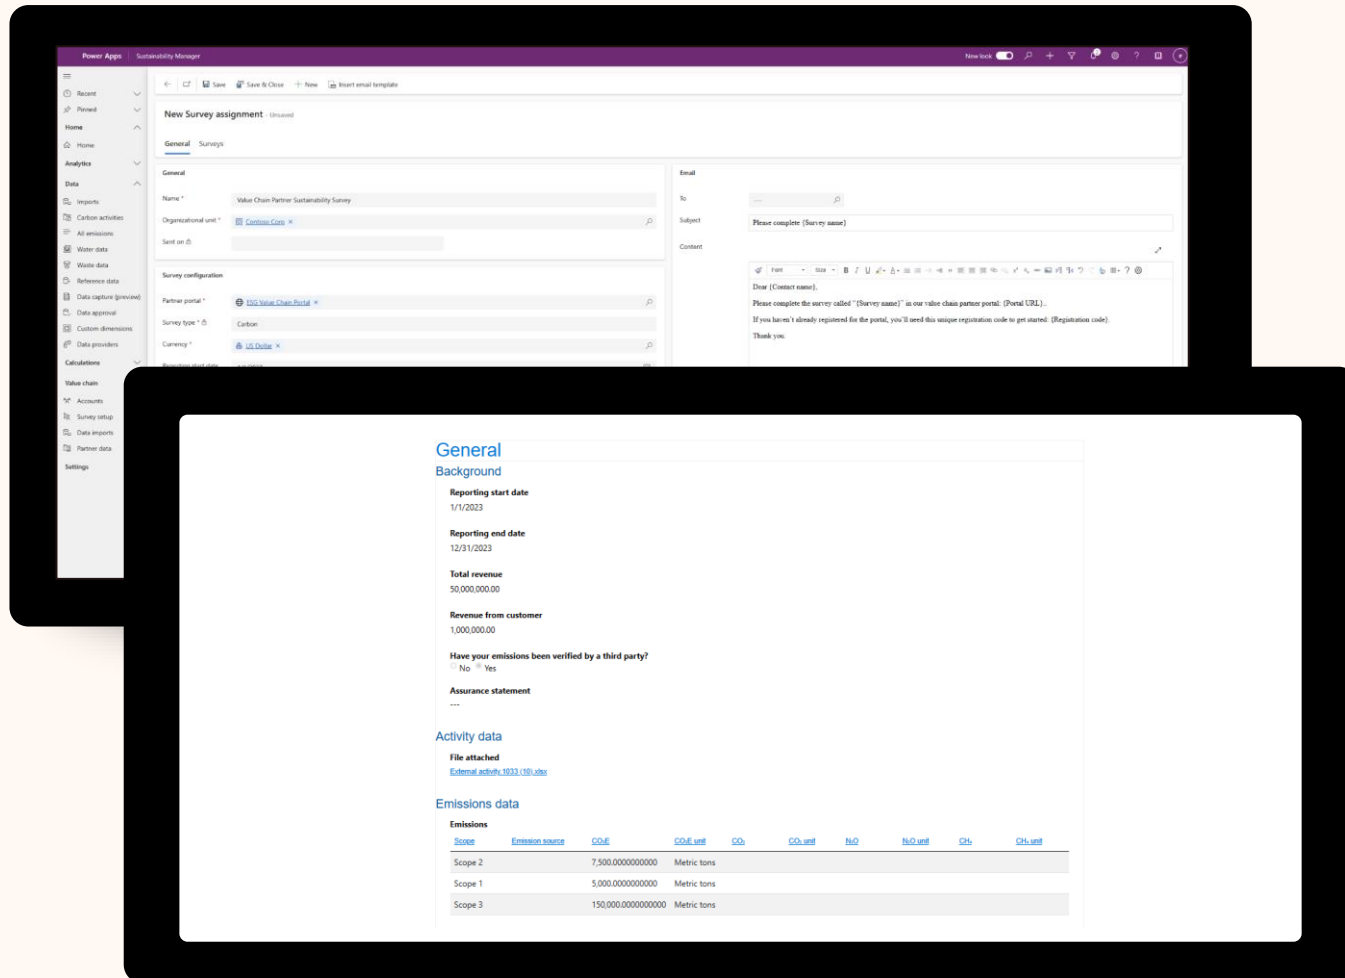

Partner specific emission factors

Bring in partner specific emission factors you can use to calculate scope 3 emissions.

Product carbon footprint data

Gather product carbon footprint (PCF) data and bring it into the PCF data model within MSM to calculate scope 3 emissions.

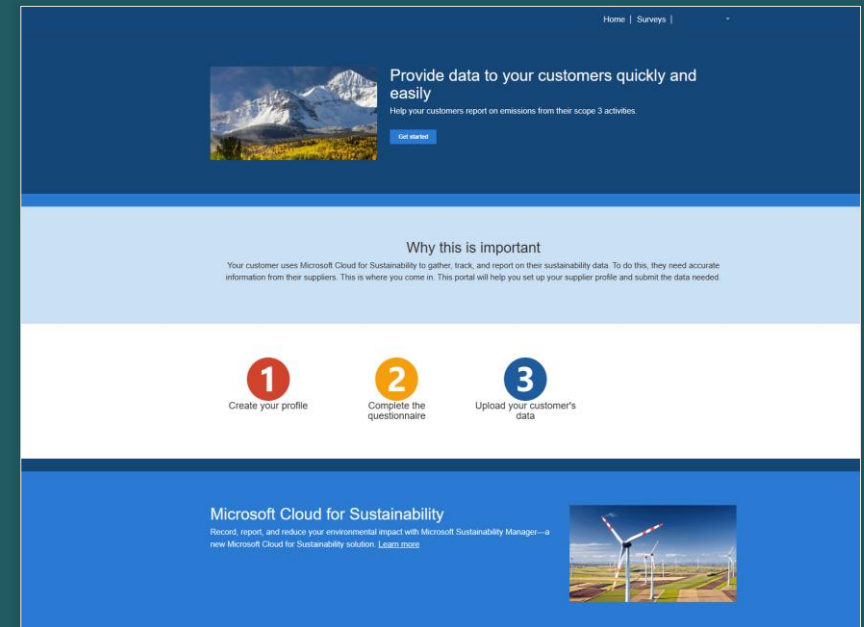

Microsoft Sustainability Manager: ESG value chain solution

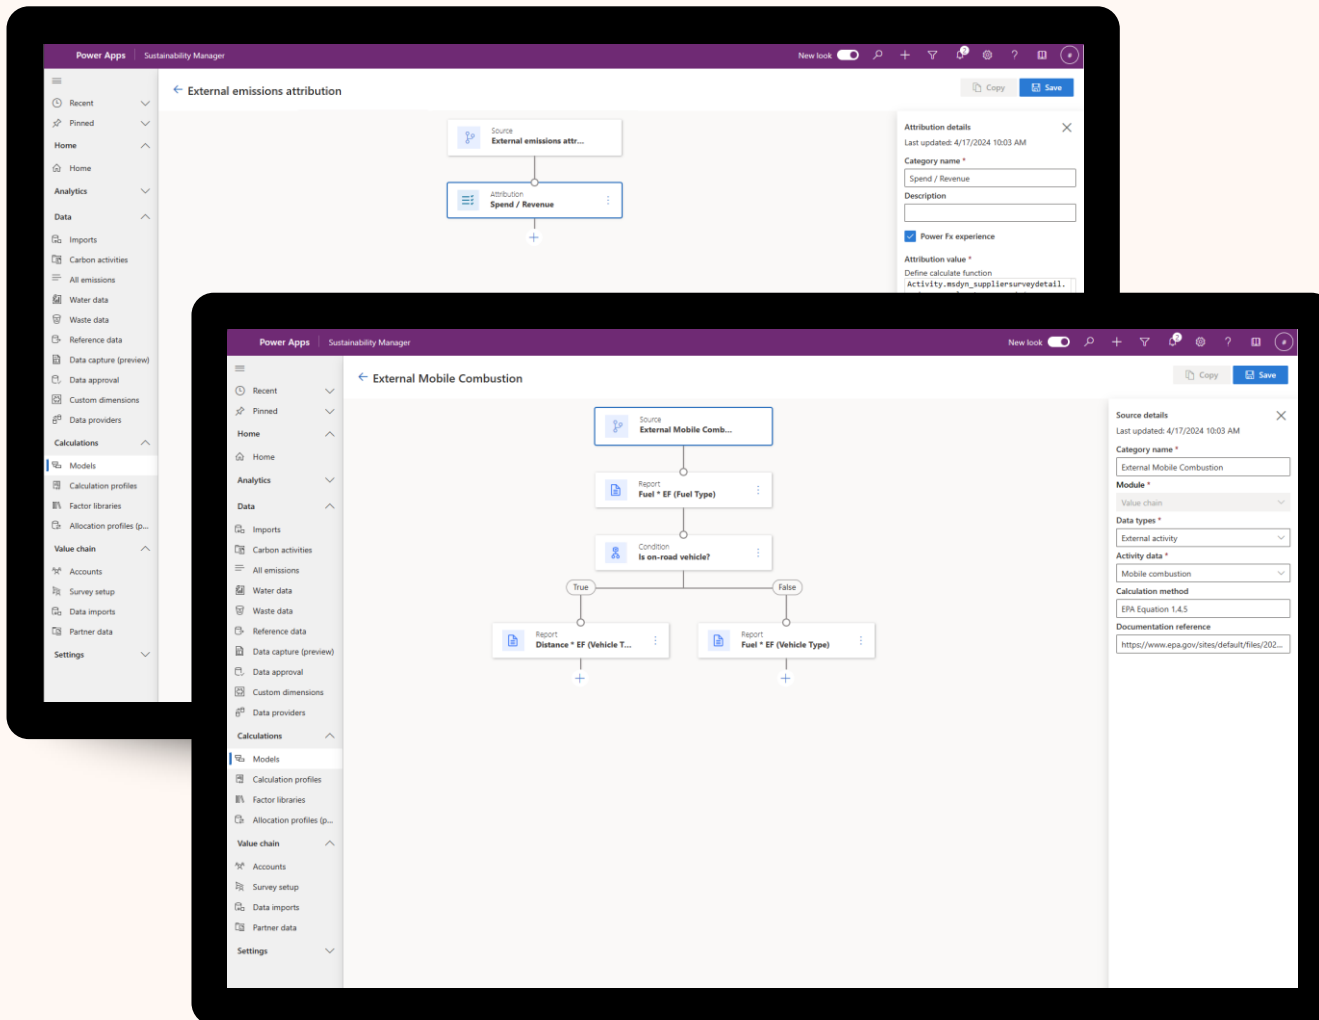

Power Pages Surveys

The Power Pages value chain template lets you request data directly from your suppliers.

Set up surveys and invite your value chain partners to complete the survey to provide you with the data you need.

Microsoft Sustainability Manager: ESG value chain solution

Calculation Models

New out of-box calculation models help you calculate emissions for your value chain and attribute the proper proportion of your value chain partners' data to your Scope 3 emissions.

Let's take a look...

Microsoft Cloud for Sustainability

Try Now

Microsoft Cloud for Sustainability

Microsoft Cloud for Sustainability provides capabilities to help accelerate your sustainability progress through automated data connections and actionable insights that allow you to record, report and reduce your environmental impact.

Microsoft Sustainability Manager (Premium)
Monitor and manage your sustainability performance.

[Quick view](#) Added

Microsoft Sustainability Manager (Essentials)
One or more licenses missing. [Learn more](#)
Monitor and manage your sustainability performance.

[Quick view](#) Add

Cloud for Sustainability data model
Break down data silos across emissions sources and centralize disparate emissions data.

[Quick view](#) Add

Navigating Environmental Sustainability
Learn about how business transformations need to be aligned with global climate action to make an impact while growing sustainably.

[Quick view](#) [Learn more](#)

Cloud for Sustainability water data model
Unify water measurement data from sites across your organization using a single data model to help meet sustainability goals.

[Quick view](#) Add

Cloud for Sustainability waste data model
Standardize and store waste data such as generated quantity by composition/category and their associated disposal method from sites across your organization using a single data model to help meet net zero sustainability goals.

[Quick view](#) Add

Microsoft Teams
Use the familiar tools of Microsoft Teams within Microsoft Sustainability Manager to collaborate on sustainability goals.

[Quick view](#) [Go to setup](#)

Emissions Impact Dashboard for Azure
Estimate your carbon emissions related to using Microsoft cloud services and make more data-driven decisions about cloud usage.

[Quick view](#) Add

Emissions Impact Dashboard for Microsoft 365
Quantify emissions from your organization's usage of Microsoft 365.

[Quick view](#) Add

Emissions savings estimator for Microsoft Cloud
Compare emissions footprints of workloads on premises or in the cloud.

[Quick view](#) [Go to setup](#)

Microsoft Surface Emissions Estimator
Microsoft Surface Emissions Estimator helps you estimate the carbon emissions of your Microsoft Surface devices.

[Quick view](#) [Go to setup](#)

Azure Migration and Modernization Program
Get expert assistance to set up your cloud environment and move forward with confidence.
