Copilot in Microsoft Sustainability Manager

Copilot encompasses four separate skills which come together
to create a seamless assistive technology within the product.

Data querying

Querying data with Copilot allows you to quickly get information related to:

- Reference data
- Application processes

Creating a calculation model

Instead of manually creating a calculation model, describe the model using natural language and allow Copilot to create it for you.

Analyzing documents

Upload PDF, DOCX, or TXT files and ask Copilot questions regarding their contents. You can query between one and five documents at a time.

Generating a preparatory report

Allow Copilot to generate a CSRD, Emissions, Water, or Waste preparatory report for you by giving it details such as the following:

- Report name
- Reporting period
- Organizational unit
- Language
