# Protect Office 365 data, even on unmanaged devices

Employees expect access to the best tools, wherever they are—even on their own devices. IT needs confidence that critical data is secure. Intune delivers both.

Identity-driven protection

Protect data at the app level, rather than requiring the entire device to be secured.
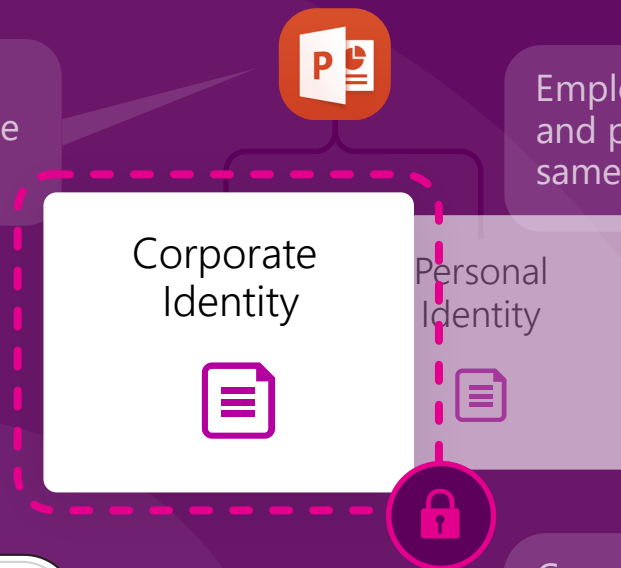

Employees can use their work and personal accounts with the same app

Corporate Identity

Personal Identity

Corporate identity and data can be removed without affecting users' apps or personal data.

Data loss prevention

Require encryption for managed app local storage

Only allow copy and paste between managed applications

Only allow Save As to secure locations

Compliance

Set up a PIN for your device

Natural user prompts guide users to compliance
