

Your genius comes in many forms.

Microsoft® OneNote® 2010 helps you capture all of your important ideas in one place using text, images, video, and audio notes. Innovative new features mean that when inspiration strikes, your important information is right at your fingertips. You can even take your OneNote 2010 notebooks with you almost anywhere—post notebooks online and then access them from virtually any computer with an Internet connection.¹

Work when and where you want using Microsoft® OneNote Web App. Store your notes online and then view and edit them in a Web browser.¹ You can even simultaneously edit the same shared notebook with others who are using OneNote 2010 or OneNote Web App.²

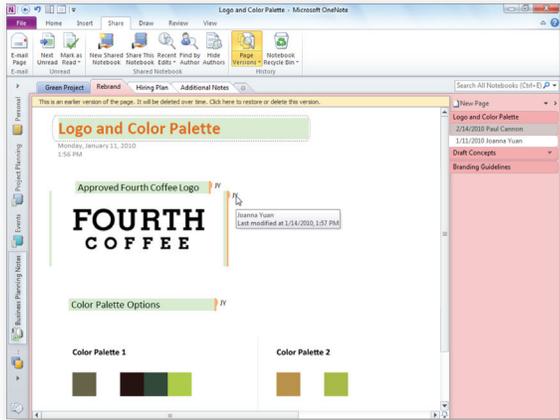

Stay organized easily with features such as new multi-level page tabs, improved tools for managing sections, and the new Quick Filing capability that makes it easy to place copies of content from almost any program exactly where you need it in your OneNote 2010 notebooks.

Stay connected to your projects using new Linked Notes. Take notes in OneNote 2010 while browsing in Windows® Internet Explorer® or working in either Microsoft® Word 2010 or Microsoft® PowerPoint® 2010. When reviewing your notes later, it takes just a click to open the source file directly to the location where you were working when you took a particular note.

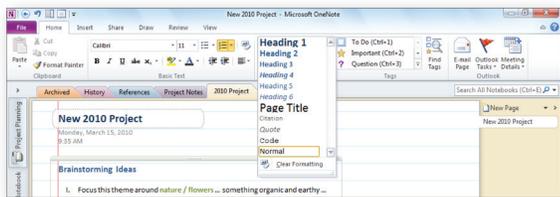

Share well with others

Enjoy a range of new and improved tools for collaborating and brainstorming with others using shared notebooks. Easily review and restore previous page versions. Automatic highlighting shows you changes others have made since you last edited the notebook and author marks show you at-a-glance who made each change.

Add some style

New text styles give you more formatting options to help organize your ideas. You can even use some of the same shortcut keys that you know from Word for basic text styling.

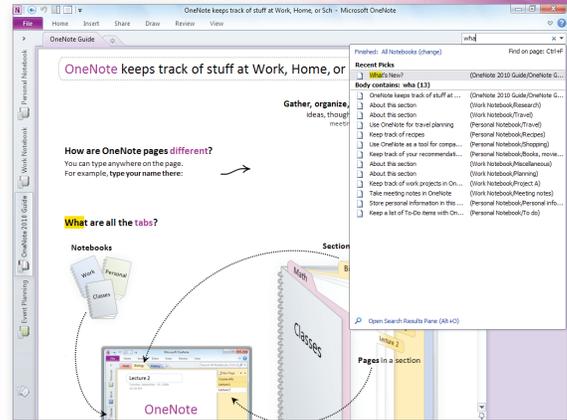

Get a Backstage view

Microsoft® Office Backstage™ view replaces the File menu with a centralized space for managing your notebooks as well as sharing, printing and publishing your notes. The improved Ribbon is also new to OneNote 2010, giving you quick access to the commands you need and the ability to customize or create your own tabs.

► Discover everything you can do with Microsoft® Office 2010 at www.microsoft.com/office2010

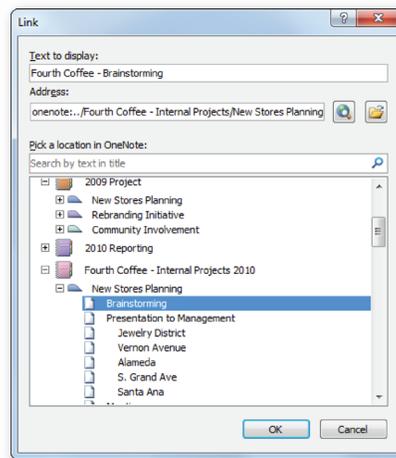

Hit the target

Improved search in OneNote 2010 shows you search results as you type. A new ranking system learns from your past choices to save you time by automatically prioritizing results.

Get the details

Easily reference related pages, sections and notebooks with wiki linking. Create wiki links to new content so that everyone who shares your notebooks is automatically pointed to the right place.

Break the language barrier

OneNote 2010 makes it easy to work across multiple languages.³ Hover over a word for instant translation using the Mini Translator or translate selected text in just a couple of clicks. You can also simplify your multilingual experience with separate language settings for editing, help, display, and ScreenTips.

¹ An appropriate device, Internet connection, and supported Internet Explorer, Firefox, or Safari browser are required, as well as either Microsoft SharePoint® Foundation 2010 or a Windows Live- ID. There are some differences between the features of the Office Web Apps and the Office 2010 applications.

² Co-authoring of shared notebooks with those outside of your network while using OneNote 2010, and co-authoring of shared notebooks using OneNote Web App, requires either Microsoft SharePoint® Foundation 2010 or a Windows Live- ID.

³ Translation features are free and do not require any add-ins. The bilingual dictionary comes by default in the box (no download), and the language and availability depends on the SKU version of your Office 2010 application. Internet service is required for Machine Translation and languages vary by provider; this will be determined automatically depending on your selection.
