

Lotus F1 Team powers employee engagement using Office 365

Challenge

Formula 1 wanted to enable its employees to use any device to access all the information they needed, securely, from anywhere in the world.

Solution

The Microsoft Office 365 suite of productivity tools was adopted by formula 1 to improve its communications and collaboration capabilities, even during the critical seconds of a race.

Results

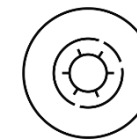

Employees and IT staff now spend less time dealing with technology, which leaves them available to focus on how to trim seconds off every lap around the track.
