

# What's my price?

Insight into decision points that impact your cost

The elephant in the room...

## How much does it cost?

This eBook is designed to help you understand the decision points that impact your business solution cost. When evaluating accounting management solutions, the components that determine price are somewhat standard. Where you will find differences is around the degree of flexibility within the enterprise resource planning (ERP) solution to choose what is right for your business.

With Microsoft Dynamics ERP, your price is dependent on YOU!

Your business is unique, so why force fit your company into a preconfigured solution? With Microsoft Dynamics, the power of choice is yours.

Consider how you configure a car on the manufacturer's website.

Why not get the same power of choice with accounting software?

 Microsoft Dynamics

## Configuring your ERP solution

What impacts your price? Common components include:

1. How you deploy your solution:  
Cloud? On-Premises?
2. How many users do you need?
3. What do you need to run your business?
4. What are your implementation and training needs?

Understanding your power of choice across these components is critical to selecting a business solution that enables your continued growth. As you would expect, more standard selections, versus more customized options, impact your cost. Your ability to choose what is best for your business success today, combined with the confidence your solution can scale to support your continued growth....is priceless.

## Let's get started...

# Build your business solution

Access to  
information  
Any time...  
Anywhere...  
On any device...

How do you want to deploy  
your business solution today?  
Tomorrow?

*On-premise, cloud or hybrid  
model?*
