

A Data Management Application Spanning Hybrid Environments, RedPoint Data Management™ Leverages Power of Microsoft Azure Platform

MICROSOFT AZURE ISV PROFILE: REDPOINT GLOBAL

RedPoint Global offers a comprehensive set of world-class ETL, data quality, and data integration applications that operate in and across both traditional and Hadoop 2.0/YARN environments. RedPoint Data Management allows you to manage your traditional data and Big Data within the same application.

WHAT WE OFFER

Unlock the potential of your data with RedPoint Data Management. RedPoint offers a comprehensive set of world-class ETL, data quality, and data integration applications that operate in and across both traditional and Hadoop 2.0/YARN environments.

One application for data quality and integration. Avoid the mistakes and inefficiencies of handling data quality and data integration separately – RedPoint's single, integrated application can do both. Ensure data governance by creating a single point of control. RedPoint delivers more than 350 data quality and data integration functions on Hadoop data.

No MapReduce skills are required. **RedPoint enables business users without specialized programming skills to easily access and manipulate data directly within the Hadoop cluster.** Users can take advantage of its intuitive graphical user interface with no programming required.

RedPoint executes its data quality and data integration tasks "inside" Hadoop, without data movement. **RedPoint leverages the intrinsic scalability of Hadoop**, so there's no wasted time or additional storage or computing expense. And with a zero footprint install, RedPoint doesn't compete for computing resources in the cluster.

WHAT OUR CUSTOMERS ARE SAYING

"RedPoint enables us to systematically automate and simplify our data processing operations and be assured that the data we are providing is completely cleansed and immediately actionable." – Kurt Alfi, Production Manager, ALC's DataCentrix Division

Microsoft Azure

Microsoft Azure is an open and flexible cloud platform that enables you to quickly build, deploy, scale, and manage applications across a global network of Microsoft data centers. You can build applications using multiple languages, tools, and frameworks.

KEY USE CASES

WEB APPLICATIONS

Build anything from lightweight websites to multi-tier cloud services that scale up as your traffic grows.

CLOUD STORAGE

Rely on geo-redundant cloud storage for backup, archiving, and disaster recovery.

BIG DATA & HPC

Get actionable insights from your data by taking advantage of a fully compatible enterprise-ready Hadoop service.

MOBILE

Accelerate your mobile app development by using a backend hosted in Microsoft Azure. Scale instantly as your install base grows.

MEDIA

Create, manage, and distribute media in the cloud – everything from encoding to content protection to streaming and analytics support.

FLEXIBLE APPLICATION MODEL

Microsoft Azure provides a rich set of application services, including SDKs, caching, messaging, and identity. You can write applications in .NET, PHP, Java, node.js, Python, Ruby, or using open REST protocols. This is all part of Microsoft's promise to let you build using any language, tool, or framework.

ALWAYS ON, ALWAYS HERE

Build resilient applications with automatic operating system and service updating, built-in network load balancing, and geo-redundant storage. Microsoft Azure also proudly delivers a 99.95% monthly SLA. You can rely on decades of experience in data center operations and trust that everything Microsoft Azure offers is backed by industry certifications for security and compliance.

DATA CENTER WITHOUT BOUNDARIES

Microsoft Azure makes it easy for you to integrate your on-premises IT environment with the public cloud. Migrate your virtual machines to Microsoft Azure without the need to convert them to a different format. Use the robust messaging and networking capabilities in Microsoft Azure to deliver hybrid solutions, and then manage your hybrid applications from a single console with Microsoft System Center.

GLOBAL REACH

With data centers around the globe, a massive investment in data center innovation, and a worldwide Content Delivery Network, you can build applications that provide the best experience for users, wherever they are.
