Security firm Kaspersky has released its latest IT Threat Evolution report. There were some interesting findings in the report, as always, but the most interesting thing that stuck out was all the way at the bottom:

1. **Oracle Java Multiple Vulnerabilities**: DoS-attack (Gain access to a system and execute arbitrary code with local user privileges) and Cross-Site Scripting (Gain access to sensitive data). Highly Critical.
2. **Oracle Java Three Vulnerabilities**: Gain access to a system and execute arbitrary code with local user privileges. Extremely Critical.
3. **Adobe Flash Player Multiple Vulnerabilities**: Gain access to a system and execute arbitrary code with local user privileges. Gain access to sensitive data. Highly Critical.
4. **Adobe Flash Player Multiple Vulnerabilities**: Gain access to a system and execute arbitrary code with local user privileges. Bypass security systems. Highly Critical.
5. **Adobe Reader/Acrobat Multiple Vulnerabilities**: Gain access to a system and execute arbitrary code with local user privileges. Extremely Critical.
6. **Apple QuickTime Multiple Vulnerabilities**: Gain access to a system and execute arbitrary code with local user privileges. Highly Critical.
7. **Apple iTunes Multiple Vulnerabilities**: Gain access to a system and execute arbitrary code with local user privileges. Highly Critical.
8. **Winamp AVI / IT File Processing Vulnerabilities**: Gain access to a system and execute arbitrary code with local user privileges. Highly Critical.
9. **Adobe Shockwave Player Multiple Vulnerabilities**: Gain access to a system and execute arbitrary code with local user privileges. Highly Critical.
10. **Adobe Flash Player Multiple Vulnerabilities**: Gain access to a system and execute arbitrary code with local user privileges. Bypass security systems. Gain access to sensitive data. Extremely Critical.

Windows Phone 8 is much safer than Android, says Mikko Hypponen

Microsoft's mobile operating system should remain safe for a while

By **Alastair Stevenson**

Mon Nov 05 2012, 13:21

SOFTWARE HOUSE Microsoft's Windows Phone 8 is the safest mobile operating system available, according to F-Secure security chief Mikko Hypponen, who added that Android remains a haven for cyber crimianls.

Hypponen highlighted the inherent security features of Windows Phone 8, telling The INQUIRER that F-Secure has yet to detect a single piece of mobile malware targeting Microsoft's mobile operating system.

"Windows Phone is safe, we've seen no malware at all targeting the platform. You
