# Agenda

1. Work @ G+D

2. RTC vs. TFS

3. TFS Introduction

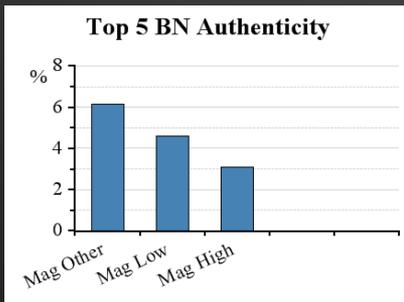

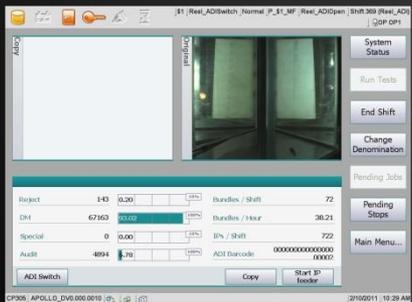

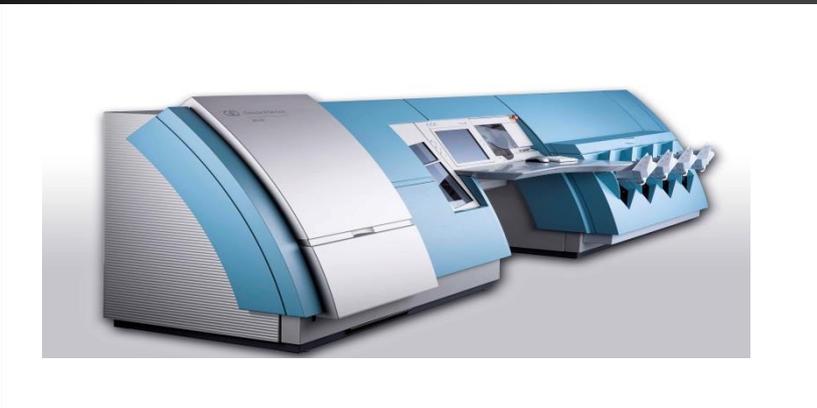

4. Summary

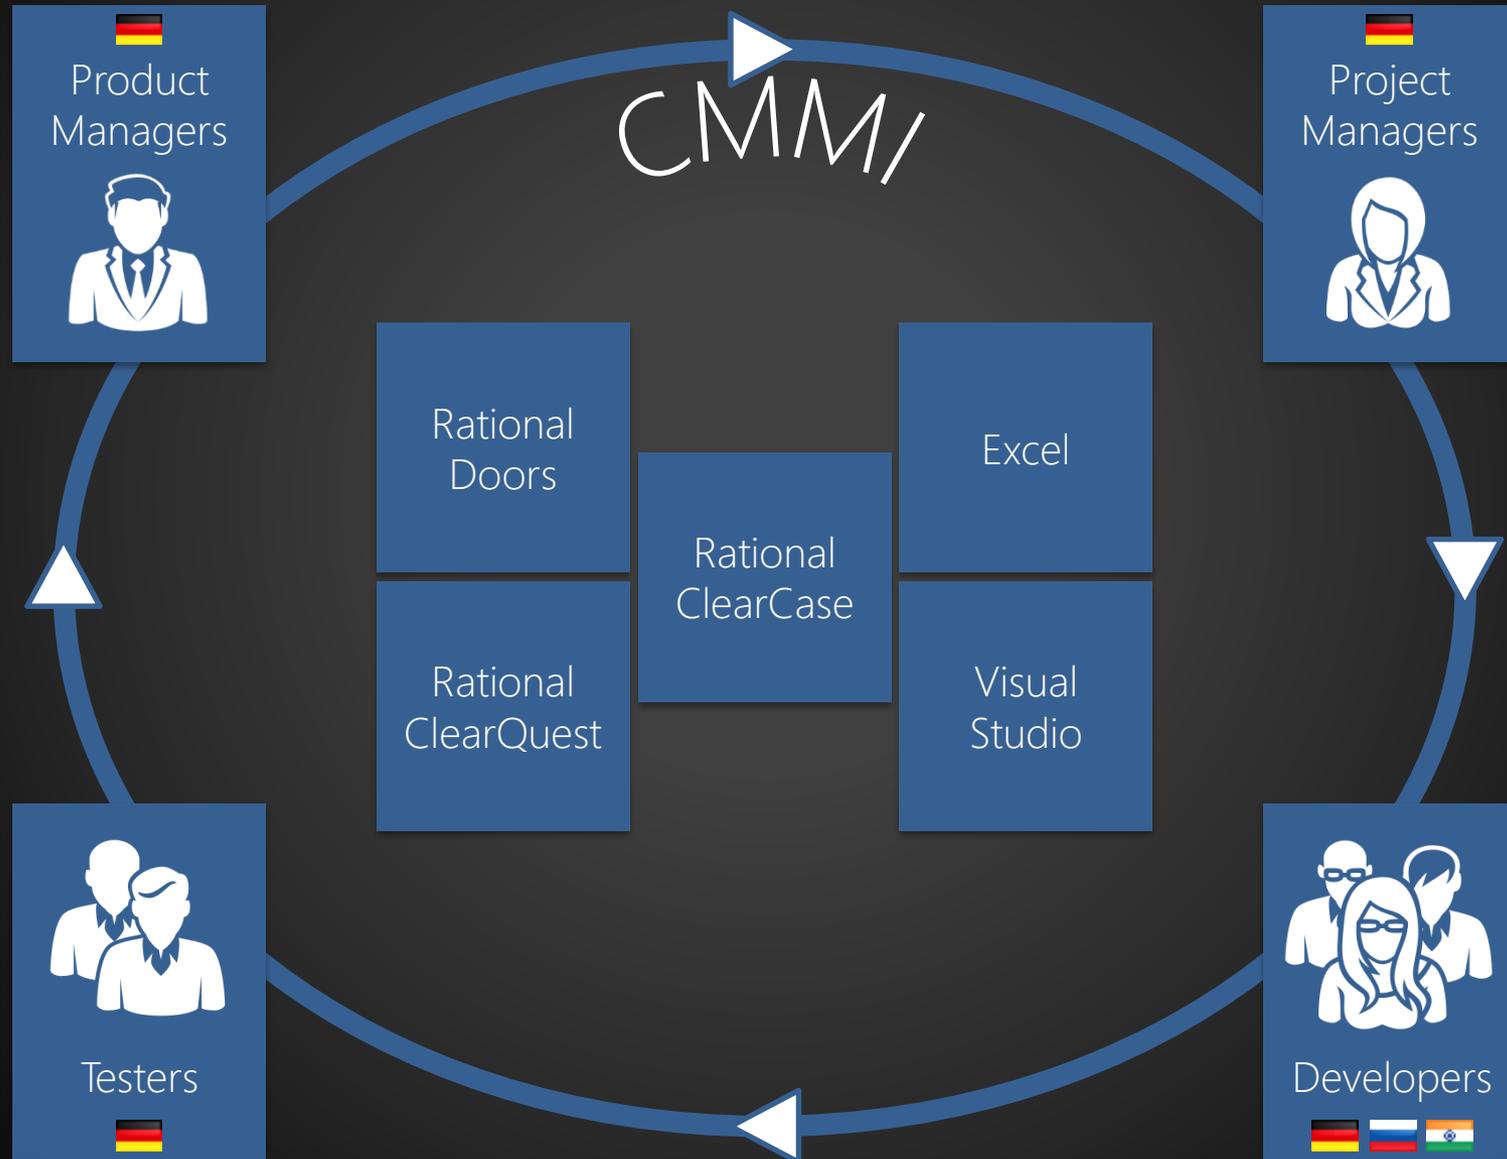

# Work @ G+D

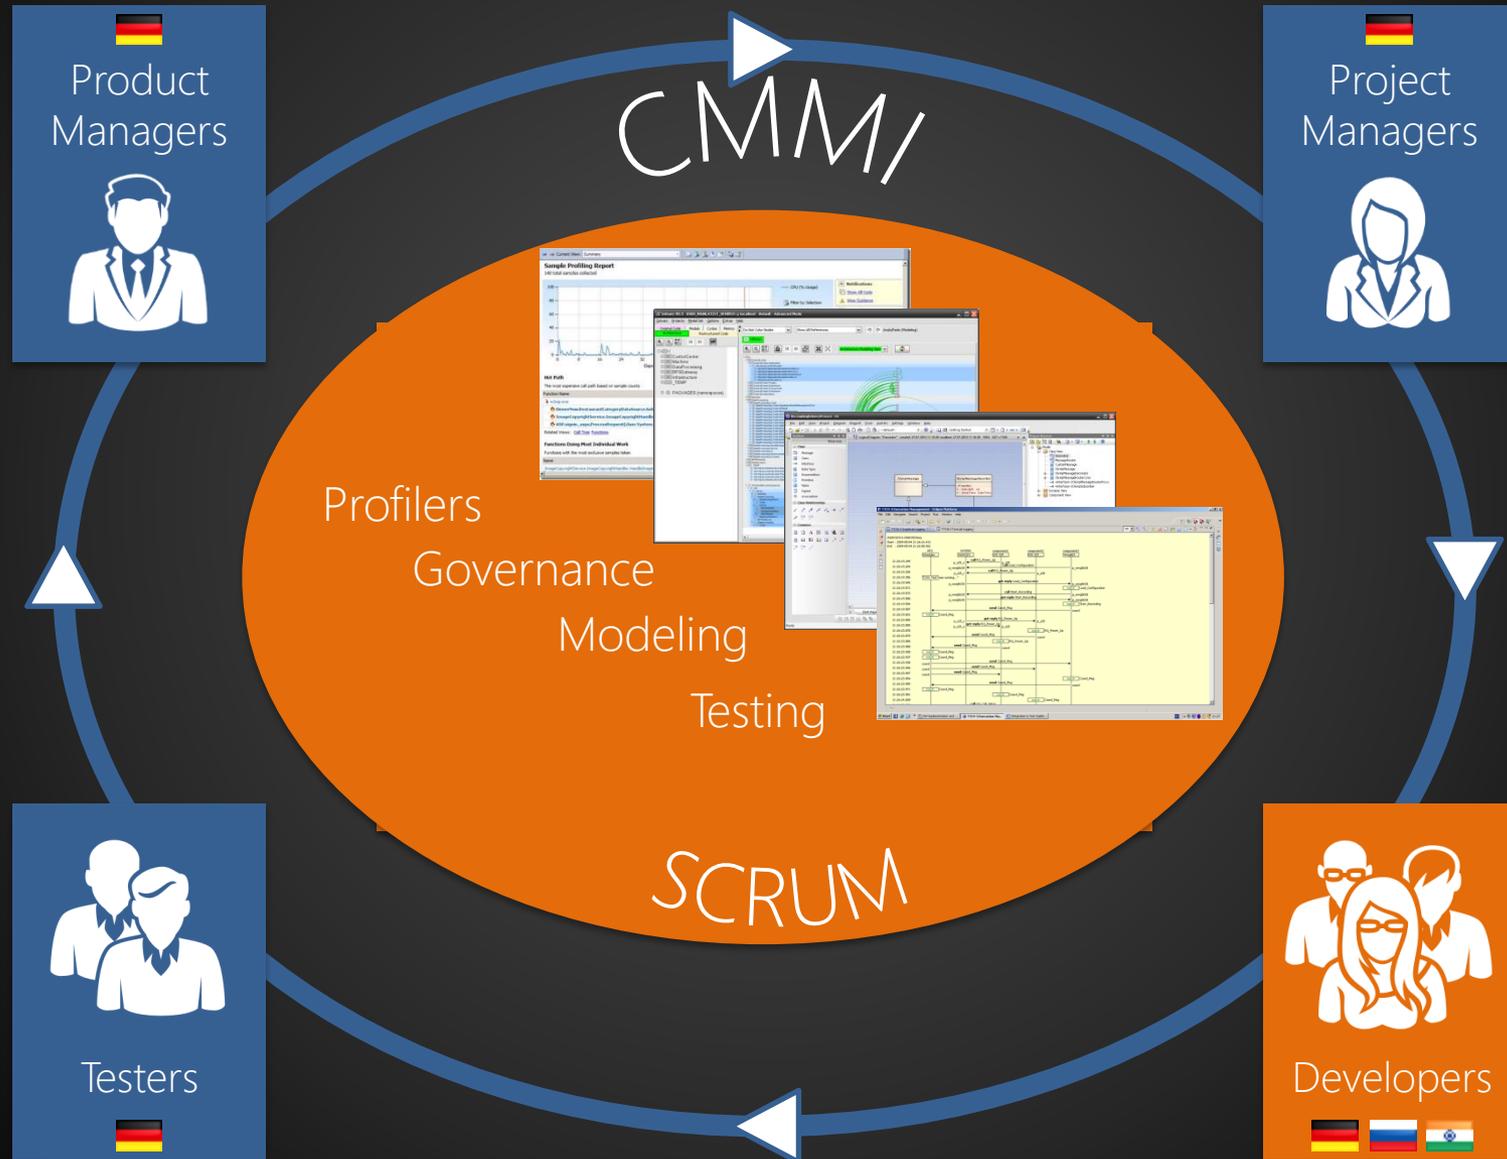

# Products

# Process

# Development Tools

Developer

# Development Team

- Munich
- Russia
- India
- US, Canada

- Developers 40-100
- Development partners
- Feature Driven Development
- SCRUM

- 10-12 Tools for developers
- Sharepoint for collaboration
- Web folders

# Motivation for ALM

- Reduce number of tools
- Shorten task execution times for developers
- Automate tasks as much as possible
- Improve collaboration even with remote sites
- Harmonize tools across locations & suppliers

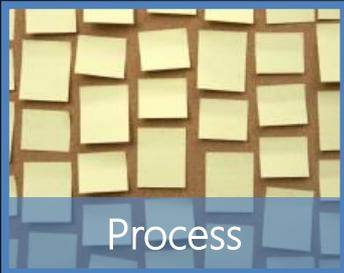

# RTC vs. TFS

# Key Requirements

- Reduce number of tools
- Seamless and complete integration

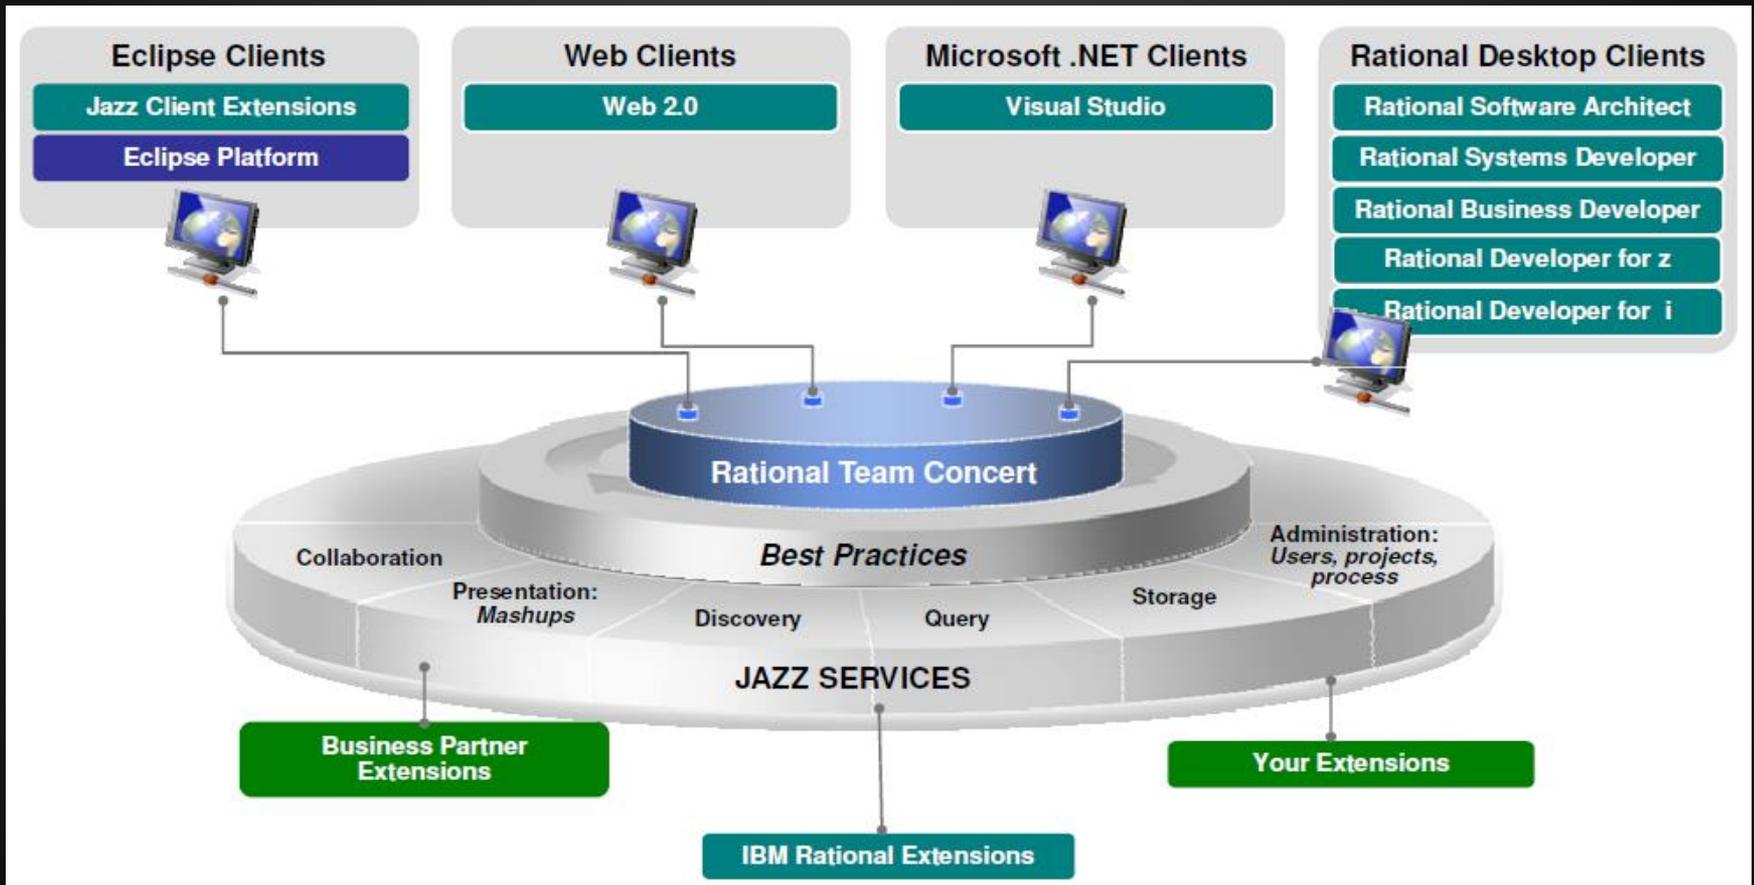

- Complete traceability through product lifecycle
- Support of feature driven development and SCRUM

- Project centric access to all artifacts
- Office integration to reuse existing products
- Offline support

# RTC

# VS Integration

The screenshot displays the Microsoft Visual Studio environment with the Rational Team Concert (RTC) integration. The main window is titled "38 : Workshop Kamikaze Changes - Microsoft Visual Studio". The menu bar includes File, Edit, View, Debug, Team, Data, Tools, Architecture, Test, Analyze, Team Concert, Window, and Help. The toolbar shows various icons for file operations and development tasks.

The "Task 38" panel is active, showing a summary for "Workshop Kamikaze Changes". It includes a "Summary" field, a "New" button, and a list of items with "Add File...", "Remove", and "Add..." buttons. Below this, there is a "Links" section with a list of change sets, including "Changes in Default Component - <No Comment> - kmadin - Dec 8, 2010 3:15 PM".

The "Team Artifacts" panel on the right shows a tree view of artifacts, including "Shared Queries", "Predefined", and "Individually Shared".

The "Pending Changes" panel at the bottom shows "2 incoming change sets". The "Solution Explorer" panel on the right shows the project structure, including "Apollo Timo's Workspace", "Default Component", and "Incoming".

The status bar at the bottom indicates "Ready" and shows various toolbars like "Change Explorer", "Repository Files", "Pending Changes", "Team Advisor", and "Work Items".

# Strength

## TFS 2010

- IDE integration
- Sharepoint for collaboration
- Office integration
- Low administration effort

## RTC 2.0

- Extensive team support
- Rich web interface
- Support of OSLC

# Weakness

## TFS 2010

- Work item versioning
- Planning

## RTC 2.0

- Streaming concept
- Integration (IDE, Office)
- Maturity
- Separate tool for configuration
- Data warehouse not customizable

# Decision

- All project roles involved
- Based on most important use cases
- Criteria catalogue with approx. 150 items
- Voted clearly for TFS

# Why TFS

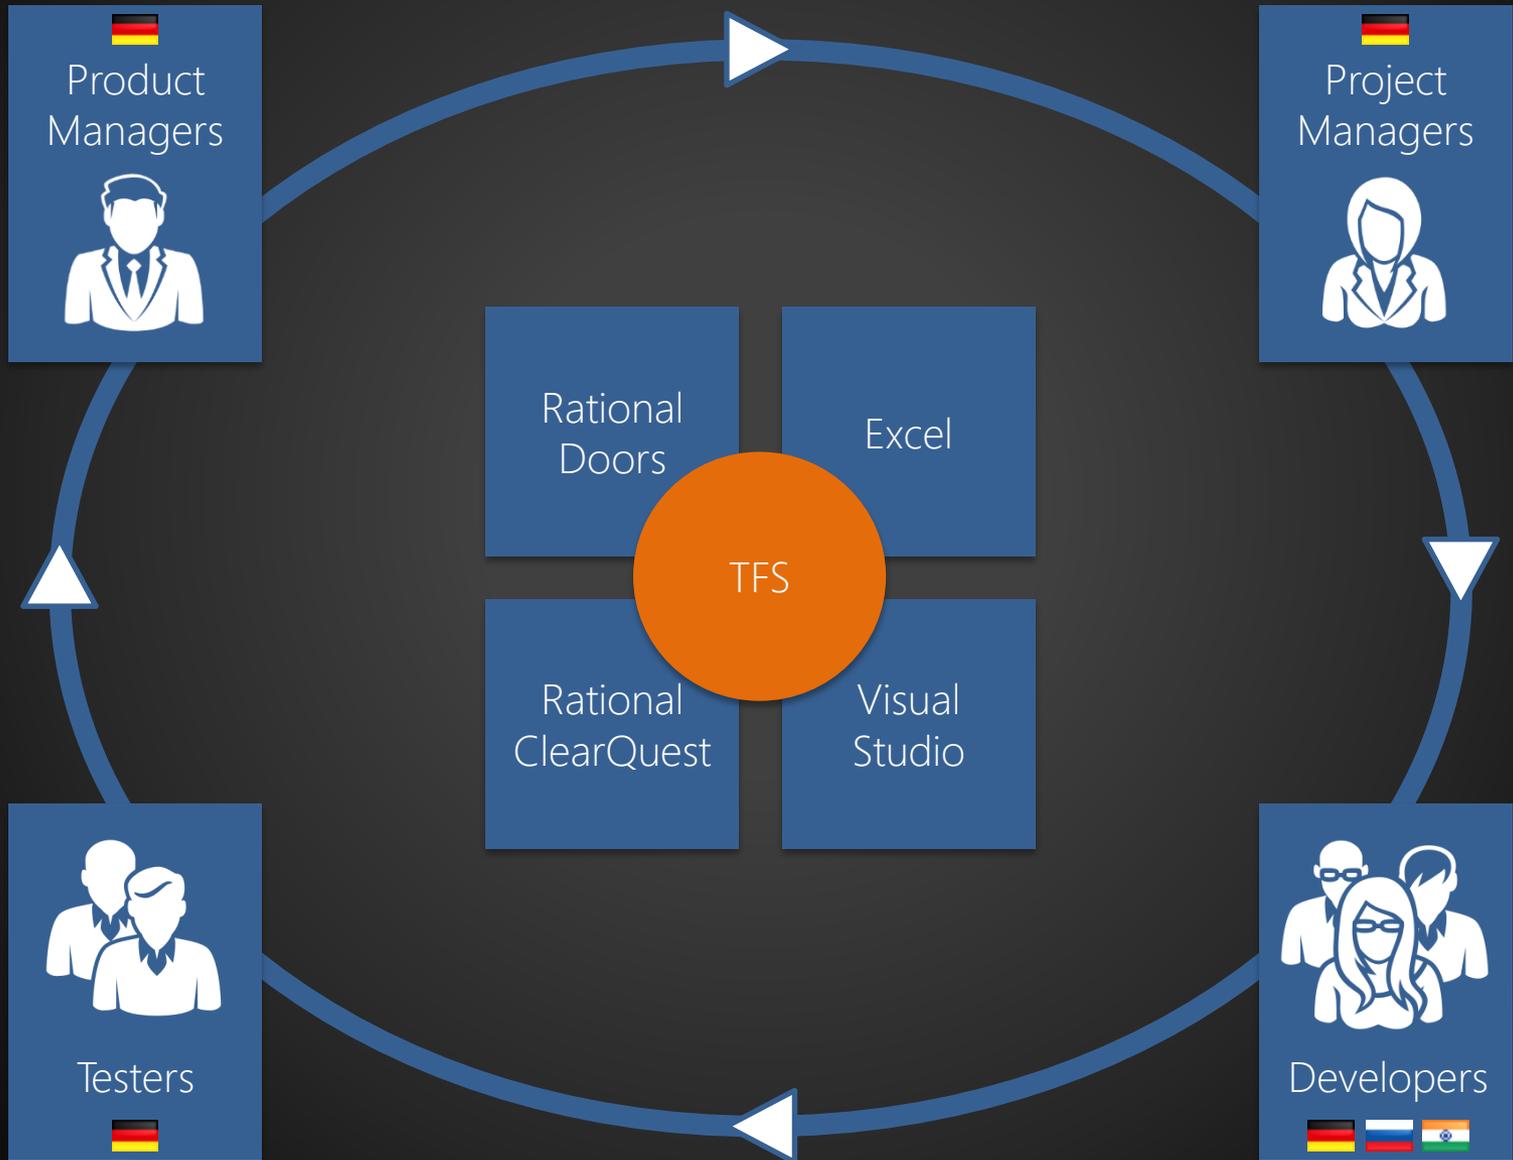

- Confidence of expected benefits
- Key requirements coverage
- Development process support
- Maturity, customer feedback & market share

# Summary

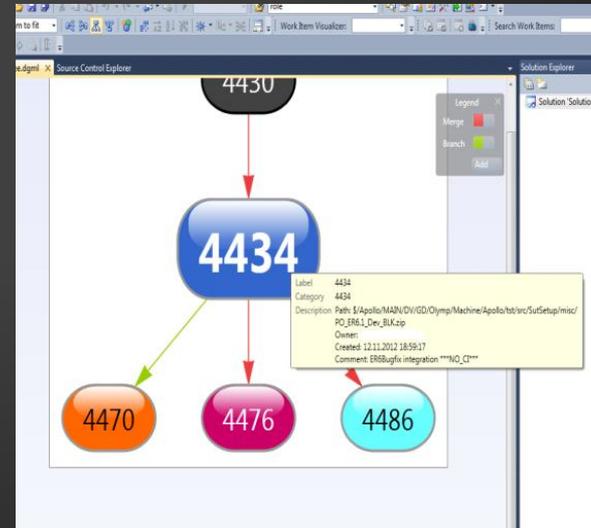

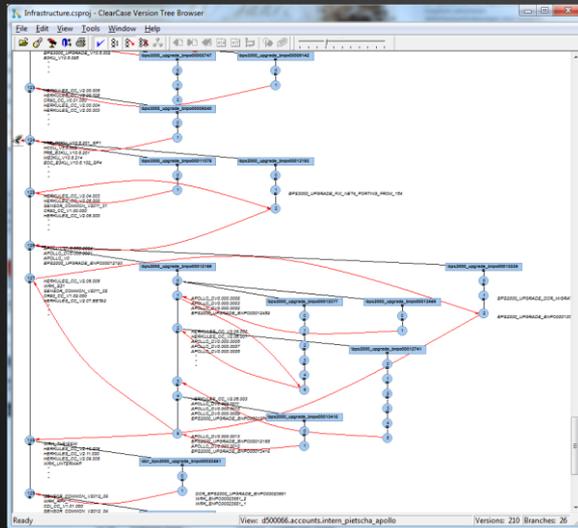

# What users like

- Faster builds
- Improved development flow
- Gated check-ins enforce stability
- Collaboration with remote development sites

# What users miss

- Version-Tree view from ClearCase
- Planning info
- Sprint info

# Results of introduction

- Successful rollout as scheduled
- Low administration effort as expected
- Stable development environment
- Identified potentials covered by introduction
- Increase of efficiency achieved

# Next steps

- TFS 2012 & VS 2012
- New features
- Customization
- Extend user base
