# New Zealand

The statistics presented here are generated by Microsoft security programs and services running on computers in New Zealand in 4Q14 and previous quarters. This data is provided from administrators or users who choose to opt in to provide data to Microsoft, using IP address geolocation to determine country or region.

On computers running real-time security software, most attempts by malware to infect computers are blocked before they succeed. Therefore, for a comprehensive understanding of the malware landscape, it's important to consider infection attempts that are blocked as well as infections that are removed. For this reason, Microsoft uses two different metrics to measure malware prevalence:

- *Encounter rate* is simply the percentage of computers running Microsoft real-time security products that report a malware encounter, whether the infection attempt succeeds or not.
- *Computers cleaned per mille*, or *CCM*, is an infection rate metric that is defined as the number of computers cleaned for every 1,000 unique computers executing the Malicious Software Removal Tool (MSRT), a free tool distributed through Microsoft update services that removes more than 200 highly prevalent or serious threats from computers.

Infection rate statistics for New Zealand

Metric	1Q14	2Q14	3Q14	4Q14
Encounter rate, New Zealand	12.4%	9.9%	10.8%	9.4%
<i>Worldwide encounter rate</i>	<i>21.5%</i>	<i>19.2%</i>	<i>20.1%</i>	<i>15.9%</i>
CCM, New Zealand	5.1	6.8	4.2	2.8
<i>Worldwide CCM</i>	<i>10.3</i>	<i>11.5</i>	<i>8.6</i>	<i>5.9</i>

Encounter and infection rates reported here do not include totals for the Brantall, Filcoute, and Rotbrow malware families. See pages 57–64 of [Microsoft Security Intelligence Report, Volume 17](#) for an explanation of this decision.

## Encounter and infection rate trends

In 4Q14, 9.4% percent of computers in New Zealand encountered malware, compared to the 4Q14 worldwide encounter rate of 15.9 percent. In addition, the MSRT detected and removed malware from 2.8 of every 1,000 unique computers scanned in New Zealand in 4Q14 (a CCM score of 2.8, compared to the 4Q14 worldwide CCM of 5.9). The following figure shows the encounter and infection rate trends for New Zealand over the last four quarters, compared to the world as a whole.

Malware encounter and infection rate trends in New Zealand and worldwide

See the Worldwide Threat Assessment section of [Microsoft Security Intelligence Report, Volume 18](#) at [www.microsoft.com/sir](http://www.microsoft.com/sir) for more information about threats in New Zealand and around the world, and for explanations of the methods and terms used here.

## Malware categories

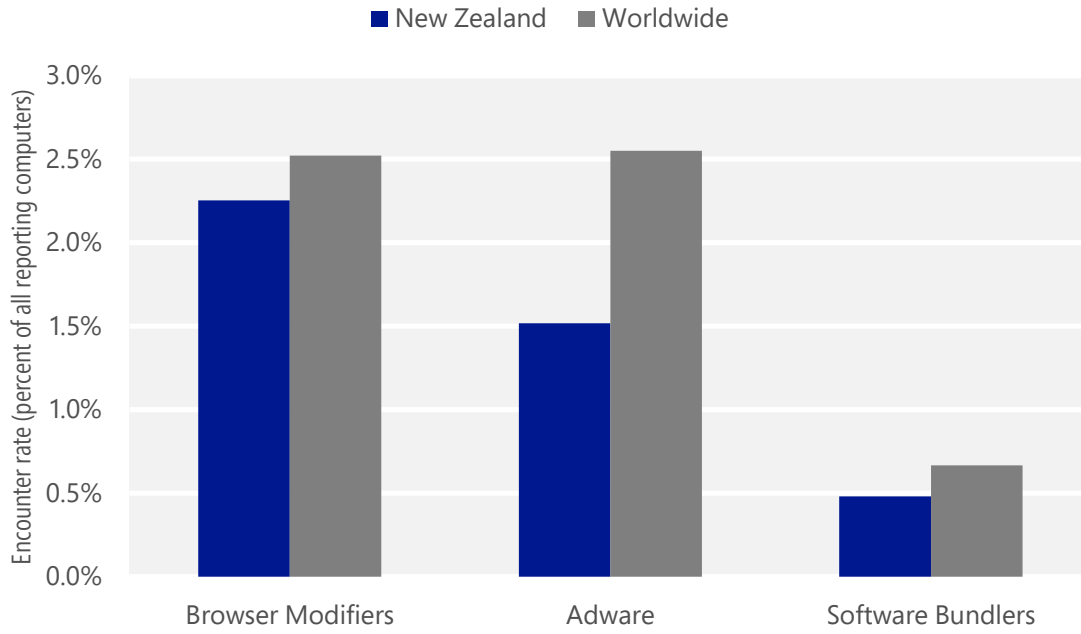

Malware encountered in New Zealand in 4Q14, by category

- The most common malware category in New Zealand in 4Q14 was Exploits. It was encountered by 1.7 percent of all computers there, down from 2.5 percent in 3Q14.
- The second most common malware category in New Zealand in 4Q14 was Trojans. It was encountered by 1.7 percent of all computers there, down from 2.0 percent in 3Q14.
- The third most common malware category in New Zealand in 4Q14 was Worms, which was encountered by 1.3 percent of all computers there, down from 1.5 percent in 3Q14.

## Unwanted software categories

Unwanted software encountered in New Zealand in 4Q14, by category

- The most common unwanted software category in New Zealand in 4Q14 was Browser Modifiers. It was encountered by 2.3 percent of all computers there, down from 3.8 percent in 3Q14.
- The second most common unwanted software category in New Zealand in 4Q14 was Adware. It was encountered by 1.5 percent of all computers there, up from 0.6 percent in 3Q14.
- The third most common unwanted software category in New Zealand in 4Q14 was Software Bundlers, which was encountered by 0.5 percent of all computers there, up from 0.1 percent in 3Q14.

## Top malware families by encounter rate

The most common malware families encountered in New Zealand in 4Q14

	Family	Most significant category	% of reporting computers
1	<a href="#">JS/Axpergle</a>	Exploits	0.8%
2	<a href="#">Win32/Obfuscator</a>	Obfuscators & Injectors	0.6%
3	<a href="#">JS/Fiexp</a>	Exploits	0.5%
4	<a href="#">INF/Autorun</a>	Obfuscators & Injectors	0.5%
5	<a href="#">Win32/Upatre</a>	Downloaders & Droppers	0.2%
6	<a href="#">Win32/Tupym</a>	Worms	0.2%
7	<a href="#">Win32/Vobfus</a>	Worms	0.2%
8	<a href="#">HTML/Phish</a>	Trojans	0.2%
9	<a href="#">ASX/Wimad</a>	Downloaders & Droppers	0.2%
10	<a href="#">Win32/Lightmoon</a>	Worms	0.2%

- The most common malware family encountered in New Zealand in 4Q14 was [JS/Axpergle](#), which was encountered by 0.8 percent of reporting computers there. [JS/Axpergle](#) is a detection for the Angler exploit kit, which exploits vulnerabilities in recent versions of Internet Explorer, Silverlight, Adobe Flash Player, and Java to install malware.
- The second most common malware family encountered in New Zealand in 4Q14 was [Win32/Obfuscator](#), which was encountered by 0.6 percent of reporting computers there. [Win32/Obfuscator](#) is a generic detection for programs that have had their purpose disguised to hinder analysis or detection by antivirus scanners. Such programs commonly employ a combination of methods, including encryption, compression, anti-debugging and anti-emulation techniques.
- The third most common malware family encountered in New Zealand in 4Q14 was [JS/Fiexp](#), which was encountered by 0.5 percent of reporting computers there. [JS/Fiexp](#) is a detection for the Fiesta exploit kit, which attempts to exploit Java, Adobe Flash Player, Adobe Reader, Silverlight, and Internet Explorer to install malware.
- The fourth most common malware family encountered in New Zealand in 4Q14 was [INF/Autorun](#), which was encountered by 0.5 percent of reporting computers there. [INF/Autorun](#) is a family of worms that spreads by copying itself to the mapped drives of an infected computer. The mapped drives may include network or removable drives.

## Top unwanted software families by encounter rate

The most common unwanted software families encountered in New Zealand in 4Q14

	Family	Most significant category	% of reporting computers
1	<a href="#">Win32/Couponruc</a>	Browser Modifiers	1.7%
2	<a href="#">Win32/Costmin</a>	Adware	0.8%
3	<a href="#">Win32/Defaulttab</a>	Browser Modifiers	0.6%
4	<a href="#">Win32/BetterSurf</a>	Adware	0.5%
5	<a href="#">Win32/Gofileexpress</a>	Software Bundlers	0.3%

- The most common unwanted software family encountered in New Zealand in 4Q14 was [Win32/Couponruc](#), which was encountered by 1.7 percent of reporting computers there. [Win32/Couponruc](#) is a browser modifier that changes browser settings and may also modify some computer and Internet settings.
- The second most common unwanted software family encountered in New Zealand in 4Q14 was [Win32/Costmin](#), which was encountered by 0.8 percent of reporting computers there. [Win32/Costmin](#) is an adware family that installs itself as a browser extension for Internet Explorer, Mozilla Firefox, and Google Chrome, and displays advertisements as the user browses the Internet.
- The third most common unwanted software family encountered in New Zealand in 4Q14 was [Win32/Defaulttab](#), which was encountered by 0.6 percent of reporting computers there. [Win32/Defaulttab](#) is a browser modifier that redirects web browser searches and prevents the user from changing browser settings.

## Top threat families by infection rate

The most common malware families by infection rate in New Zealand in 4Q14

	Family	Most significant category	Infection rate (CCM)
1	<a href="#">Win32/Tupym</a>	Worms	0.5
2	<a href="#">Win32/Vobfus</a>	Worms	0.5
3	<a href="#">Win32/Brontok</a>	Worms	0.3
4	<a href="#">Win32/Zbot</a>	Password Stealers & Monitoring Tools	0.2
5	<a href="#">Win32/Sality</a>	Viruses	0.2
6	<a href="#">Win32/Sefnit</a>	Trojans	0.1
7	<a href="#">JS/Miuref</a>	Trojans	0.1
8	<a href="#">VBS/Jenxcus</a>	Worms	0.1
9	<a href="#">Win32/Alureon</a>	Trojans	0.1
10	<a href="#">Win32/Wysotot</a>	Trojans	0.1

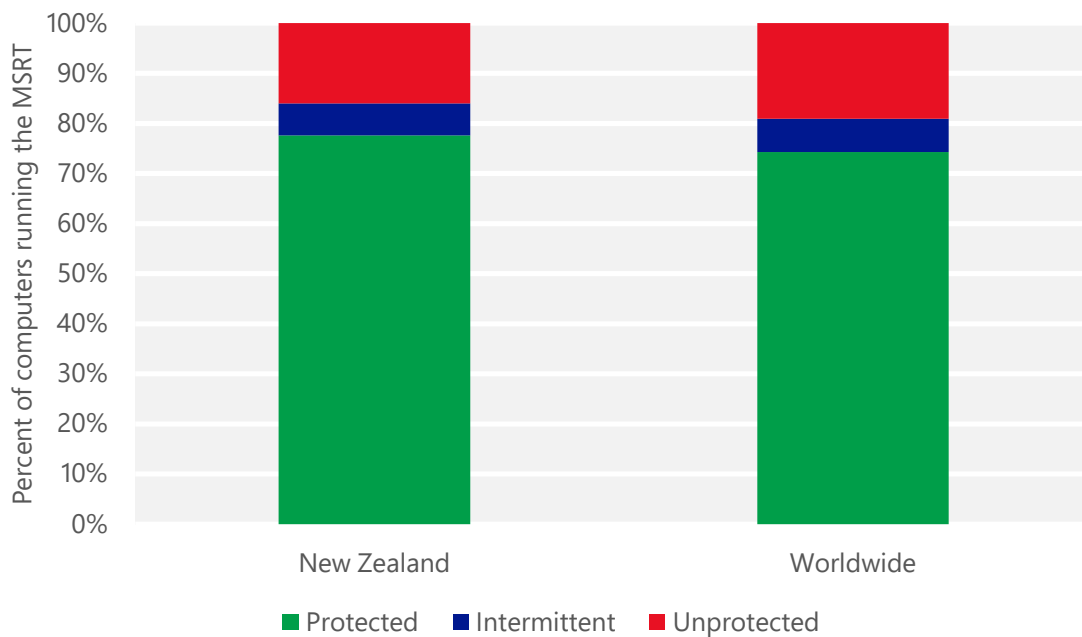

- The most common threat family infecting computers in New Zealand in 4Q14 was [Win32/Tupym](#), which was detected and removed from 0.5 of every 1,000 unique computers scanned by the MSRT. [Win32/Tupym](#) is a worm that copies itself to the system folder of the affected computer, and attempts to contact remote hosts.
- The second most common threat family infecting computers in New Zealand in 4Q14 was [Win32/Vobfus](#), which was detected and removed from 0.5 of every 1,000 unique computers scanned by the MSRT. [Win32/Vobfus](#) is a family of worms that spreads via network drives and removable drives and download/executes arbitrary files. Downloaded files may include additional malware.
- The third most common threat family infecting computers in New Zealand in 4Q14 was [Win32/Brontok](#), which was detected and removed from 0.3 of every 1,000 unique computers scanned by the MSRT. [Win32/Brontok](#) is a mass-mailing email worm that spreads by sending copies of itself as email attachments to addresses gathered from files on the infected computer, and by copying itself to removable volumes. Brontok can disable security software, and may conduct DoS attacks against certain websites.
- The fourth most common threat family infecting computers in New Zealand in 4Q14 was [Win32/Zbot](#), which was detected and removed from 0.2 of every 1,000 unique computers scanned by the MSRT. [Win32/Zbot](#) is a family of password stealing trojans that also contains backdoor functionality allowing unauthorized access and control of an affected computer.

## Security software use

Recent releases of the MSRT collect and report details about the state of real-time antimalware software on a computer, if the computer's administrator has chosen to opt in to provide data to Microsoft. This telemetry data makes it possible to analyze security software usage patterns around the world and correlate them with infection rates.

A typical computer runs the MSRT three times each quarter, once for each monthly version of the tool that Microsoft releases. In the figure below, "Protected" represents computers that had real-time security software active and up-to-date every time the MSRT ran during a quarter; "Intermittently protected" represents computers that had security software active during one or more MSRT executions, but not all of them; and "Unprotected" represents computers that did not have security software active during any MSRT executions that quarter.

Percent of computers in New Zealand and worldwide protected by real-time security software in 4Q14

## Drive-by download sites

A *drive-by download* site is a website that hosts one or more exploits that target vulnerabilities in web browsers and browser add-ons. Users with vulnerable computers can be infected with malware simply by visiting such a website, even without attempting to download anything. Drive-by download pages are usually hosted on legitimate Web sites to which an attacker has posted exploit code. Attackers gain access to legitimate sites through intrusion or by posting malicious code to a poorly secured web form, like a comment field on a blog. Compromised sites can be hosted anywhere in the world and concern nearly any subject imaginable, making it difficult for even an experienced user to identify a compromised site from a list of search results.

Search engines such as Bing have taken a number of measures to help protect users from drive-by downloads. As Bing indexes the web, pages are assessed for malicious elements or malicious behavior. Clicking the link in the list of search results displays a prominent warning, saying that the page may contain malicious software.

At the end of 3Q14, Bing detected 0.07 drive-by download URLs for every 1,000 URLs hosted in New Zealand, compared to 0.41 worldwide. At the end of 4Q14, Bing detected 0.07 drive-by download URLs for every 1,000 URLs hosted in New Zealand, compared to 0.45 worldwide.

Drive-by download pages per 1,000 URLs hosted in New Zealand and worldwide

Metric	October 1, 2014	January 1, 2015
Drive-by download pages per 1,000 URLs, New Zealand	0.07	0.07
<i>Drive-by download pages per 1,000 URLs worldwide</i>	<i>0.41</i>	<i>0.45</i>
